Acti9 iC40N circuit breakers
6000 A / 10 kA

Country approval pictogram

IEC/EN 60947-2
IEC/EN 60898-1

As per the above standards:
Circuit breakers which combine the following functions:
- circuit protection against short-circuit currents,
- circuit protection against overload currents,
- suitable for isolation.

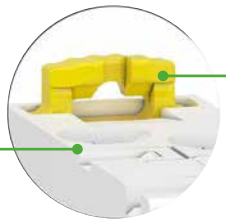
3P	340
3P+N	345

Acti9 iC40 circuit breakers

■ Automatic cable guiding in the correct position: terminals with guard

■ Reinforced cable pull-out strength: serrated terminals

■ Where there is a comb tooth, the connection of cables of cross section 16 mm² remains possible



■ Assembly and disassembly with comb busbar in place by operating toggle latches at the top and bottom of the products

VISI-TRIP window

■ Fault tripping is indicated by a red mechanical indicator on the front face

■ Insulated terminals IP20

VISI-SAFE window

Positive contact indication

■ A green strip on the toggle indicates full opening of all the poles

■ Downstream maintenance operations can be carried out in better safety conditions

■ Padlocking possible

Markings

■ Area for marking by 12 mm high label on the front panel

Markings

■ Area for 4 marking clips alongside the downstream terminal

Connection

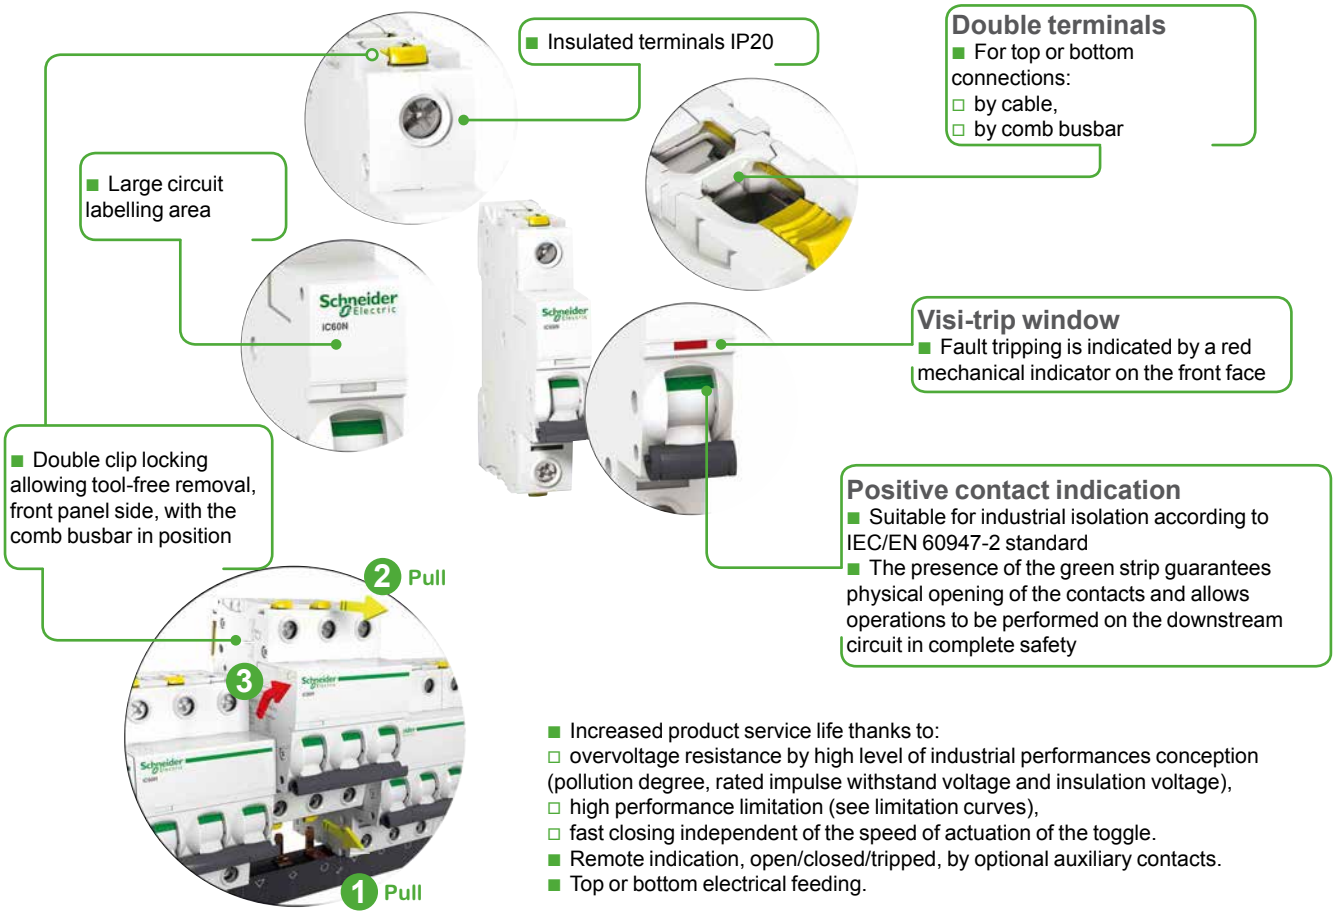
iC60N double terminals circuit breakers (curve B, C, D) (cont.)



■ Increased product service life thanks to:
□ overvoltage resistance by high level of industrial performances conception (pollution degree, rated impulse withstand voltage and insulation voltage),
□ high performance limitation (see limitation curves),
□ fast closing independent of the speed of actuation of the toggle.
■ Remote indication, open/closed/tripped, by optional auxiliary contacts.
■ Top or bottom electrical feeding.

iC60L circuit breakers (curve B, C, K, Z) (cont.)

PB104436-40

■ Insulated terminals IP20

Visi-trip window
■ Fault tripping is indicated by a red mechanical indicator on the front face

■ Large circuit labelling area

Positive contact indication
■ Suitable for industrial isolation according to IEC/EN 60947-2 standard.
■ The presence of the green strip guarantees physical opening of the contacts and allows operations to be performed on the downstream circuit in complete safety

■ Double clip for dismounting with comb busbar in place

■ Increased product service life thanks to:
□ overvoltage resistance by high level of industrial performances conception (pollution degree, rated impulse withstand voltage and insulation voltage),
□ high performance limitation (see limitation curves),
□ fast closing independent of the speed of actuation of the toggle.
■ Remote indication, open/closed/tripped, by optional auxiliary contacts.
■ Top or bottom electrical feeding.

C120 circuit breakers

PB107917-40

■ Terminals insulated to IP20

■ Location for 4 clip-on terminal markers

Positive contact indication

■ Suitability for isolation in the industrial sector to IEC/EN 60947-2.

■ The presence of the green strip guarantees that the contacts open physically and allows work to be carried out safely on the downstream circuit.

■ Longer product service life thanks to:
□ good overvoltage withstand capacity: products designed to offer a high industrial performance level (degree of pollution, rated impulse withstand voltage and insulation voltage).
□ high limitation performances (see limitation curves).
□ fast closure independent of toggle operating speed.
■ Remote indication of the open/closed/tripped state by auxiliary contacts (optional).
■ Power supply from above or below.

Technical data

- Tripping curves: C curve - Overcurrent protection for any type of application.
- Positive break indication - the green strip indicates that all the poles are open and allows work to be carried out on the downstream circuit in complete safety.
- Suitable for isolation as defined in IEC 60947-2.
- Increase in the service life of the product: thanks to fast closure independent of the speed of action on the handle.
- Current limitation in the event of a fault: fast opening of the contacts prevents the loads from being destroyed in the event of a short-circuit.

Main characteristics		
According to IEC 60947-2		
Insulation voltage (Ui)		500 V DC
Rated voltage (Un)	1P	250 V DC
	2P	500 V DC

DC circuit supplementary protectors for photovoltaic installations

C60PV-DC

PB108403-50

The C60PV-DC is a DC circuit breaker dedicated to multi string photovoltaic installations.

This circuit breaker is designed to protect the cables located between each string of photovoltaic modules and the photovoltaic inverter against overloads and short circuits (see application diagram).

Combined with a switch (of the C60NA-DC type, for example), the C60PV-DC will be installed in a string PV protection enclosure at the end of each string of photovoltaic modules.

It can be locked (by a padlocking device) in OFF position as a safety measure for removal of the PV inverter.
Since a fault current can flow in the reverse direction to the operating current, the C60PV-DC can detect and protect against any bidirectional current.

To ensure the safety of the installation, it is necessary, depending on the various types of application, to combine the C60PV-DC with:
- a residual current device at the AC end,
- a fault passage detector (insulation monitoring device) at the DC end
- an earth protection circuit breaker at the DC end (see Practical Advice CA908035).

In all cases, fast action on site will be required to clear the fault (protection not ensured in the event of a double fault).

C60PV-DC is not polarity sensitive: (+) and (-) wires can inversed without any risk.

The C60PV-DC is: delivered with three inter-pole barrier to provide increased isolation distance between two adjacent connectors.

The C60NA-DC is a direct current switch-disconnector dedicated to disconnection of the string of photovoltaic modules and the PV inverter.

It is designed to isolate the string of photovoltaic modules and the inverter from the rest of the photovoltaic installation for maintenance operations in complete safety.

Combined with a circuit breaker (of the C60PV-DC type, for example), the C60NA-DC will be installed in a string PV protection enclosure close to the strings of photovoltaic modules. It can also be installed near the PV inverter.

It can be locked (by a padlocking device) in OFF position to ensure safety during maintenance operations.
Since a fault current can flow in the reverse direction to the normal operating current, the C60NA-DC can switch a multi-directional current.

C60NA-DC is not polarity sensitive: (+) and (-) wires can inversed without any risk.

The C60NA-DC is delivered with three inter-pole barrier to provide increased isolation distance between two adjacent connectors.

iC60L circuit breakers instantaneous circuit breakers (ICB) (curve MA) (cont.)

PB104434-40

■ Insulated terminals IP20

Visi-trip window
■ Fault tripping is indicated by a red mechanical indicator on the front face

■ Large circuit labelling area

Positive contact indication
■ Suitable for industrial isolation according to IEC/EN 60947-2 standard.
■ The presence of the green strip guarantees physical opening of the contacts and allows operations to be performed on the downstream circuit in complete safety

■ Double clip for dismounting with comb busbar in place

■ Increased product service life thanks to:
□ overvoltage resistance by high level of industrial performances conception (pollution degree, rated impulse withstand voltage and insulation voltage),
□ high performance limitation (see limitation curves),
□ fast closing independent of the speed of actuation of the toggle.
■ Remote indication, open/closed/tripped, by optional auxiliary contacts.
■ Top or bottom electrical feeding.

IEC/EN 60947-2

- NG125LMA circuit breakers combine the following functions:
- circuit protection against short-circuit currents,
- suitability for industrial isolation according to IEC/EN 60947-2, standard,
- fault tripping indication by a red mechanical indicator in circuit breaker front face,
- they must be associated with overload protection for motor.

NG125LMA circuit breakers (curve MA) (cont.)

3P 80 A
- ■ Voltage taps:
- □ auxiliaries power supply
- □ measurement
- □ emergency stop
- □ remote reporting

■ Cable strength:
□ ribbed cage
□ terminal depth
□ tightening by Allen hex key (NG125 80 A)

■ Padlocking in position:
O or I, manual control is inhibited, tripping is enabled

056918N_SE-90

■ Test button to check satisfactory operation of the tripping mechanism

3P
■ Pull-out strength:
□ metallic lock

3P
■ Integrated padlocking device

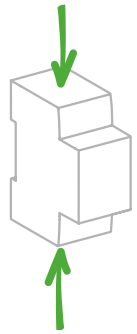
■ Impact and vibration resistance:
□ high-strength enclosure
□ IK 05

■ Central manual control, 3 positions:
□ ON
□ tripped on fault
□ open

■ Circuit breaker tripped indicator

DB123493

■Electric power supply through the top or bottom



■ Positive contact indication:
□ suitability for isolation in the industrial sector to IEC/EN 60947-2
□ the presence of the green strip guarantees that the contacts open physically and allows work to be carried out safely on the downstream circuit

■ Longer product service life due to:
□ good overvoltage withstand capacity,
□ high limitation performances,
□ fast closure independent of the speed of actuation of the toggle.

- The plug-in fuse switches disconnectors D01 and the switches disconnectors fuse D02 provide protection against overloads and short circuits.
- They are used for service sector and industrial applications.
- Depending on the versions, they should be provided with D01 or D02 type cartridges.

Accessories

- The D02 gauges allow you to limit the rating of the fuses, depending on the model used, from 20 A to 50 A.

Choice of earth leakage protection devices

Choice of sensitivity

The sensitivity of an earth leakage protection device depends mainly on the function it has to perform:
- Protection from electric shock by direct contact.
- Protection from electric shock by indirect contact.
- Protection from fire due to current leakage.

The following table gives a reminder of:
- The circuits that must be protected against these various risks (obligation or recommendation).
- The type of earth leakage protection device to be used in each case, its sensitivity, and its location in the distribution diagram.

Type of protection	Standard requirements		Additional Schneider Electric recommandations	Sensitivity (IΔn)		
	National standard *To be filled in according to the country standard*	**International standard IEC 60364**		**30 mA (*)**	**100 mA to 3000 mA** (depending on the earthing system)	**300 mA (or 500 mA)**
Protection from electric shock by direct contact						
DB123167 	To be filled in according to the country standard	Power supply for ■ General-purpose power sockets, up to 20 A ■ Appliances in the vicinity of a bathtub, shower, pond or swimming pool ■ Portable appliances for outdoor use, up to 32 A ■ Lighting To be modified according to national obligations (above)	None	**Setup in final distribution switchboard** ■ Residual current device protecting a circuit ■ Residual current circuit breaker protecting a group of circuits		
Protection from electric shock by indirect contact						
DB123168 	To be filled in according to the country standard	The entire power distribution system, except for devices: ■ With class II insulation ■ Operating at Safety Extra Low Voltage (class III) To be modified according to national obligations (above)	None	If ground continuity is not ensured over the time	**Setup in final distribution switchboard** ■ Residual current circuit breaker or device, on incoming feeder **Setup in subdistribution board or main switchboard** ■ Residual current device protecting a circuit ■ Residual current device or circuit breaker protecting a group of circuits ■ On incoming feeder: residual current circuit breaker or device	
Protection from fire due to current leakage						
DB123169 	To be filled in according to the country standard	■ High-risk premises: □ explosion (BE3) □ fire (BE2) ■ Agricultural and horticultural buildings ■ Equipment for fairs, exhibitions and shows ■ Temporary outdoor recreational installations To be modified according to national obligations (above)	■ Dilapidated buildings or electrical installations ■ Humid atmospheres: agricultural buildings, public swimming pools ■ Presence of chemical agents			**Setup in final distribution switchboard** ■ Residual current circuit breaker or device, on incoming feeder **Setup in subdistribution board or main switchboard** ■ Residual current device protecting each circuit to a high-risk zone ■ Residual current device or circuit breaker protecting a group of circuits ■ On incoming feeder: residual current circuit breaker or device

(*) The 10 mA sensitivity is useful for certain very specific applications, where there is a risk that someone could sustain a non-dangerous current (10 to 30 mA) without being able to get free. Example: healthcare equipment for hospital beds. Generally, devices with this very high sensitivity are liable to cause frequent tripping, due to the natural leakage currents of the installation.

Choice of earth leakage protection devices (cont.)

Interference immunity

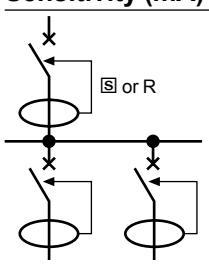
Schneider Electric provides various equipment technologies capable of overcoming the consequences of interference of all kinds.

Operating conditions		Examples	Types				
			AC	A	A-SI	F	B
Loads							
With no special characteristics		■ General-purpose power sockets ■ Incandescent lighting ■ Household appliances: microwave oven, dishwasher, clothes dryer ■ Electric heating, water heater	■	■	■	■	■
Including a rectifier	Single phase	■ Household appliances: induction cooking appliances, washing machines (variable speed) ■ Single-phase variable speed drives	–	■	■	■	■
	Three phase	■ Three-phase variable speed industrial drives ■ Three-phase uninterruptible power supplies	–	–	–	–	■
Generating high-frequency interference (current peaks, harmonics)		■ Fluorescent lighting powered by extra low voltage transformer, by electronic ballast ■ Variable luminosity lighting ■ Powerful IT equipment ■ Single-phase variable speed industrial drives ■ Air conditioning ■ Telecommunications equipment ■ Capacitor banks	–	–	■	■	■
Including an anti-harmonic filter in the power supply		■ Microcomputer systems ■ Computer peripherals (printers, scanners, etc.)	–	–	■	–	■
Electrical environment							
Vicinity of equipment generating transient overvoltages		■ High-powered switching devices ■ Reactive energy compensation banks	–	–	■	■	■
Circuits powered by an uninterruptible power supply		■ Backed-up networks	–	–	■	–	■
"Isolated neutral" (IT) earthing system		–	–	–	■	–	■
Major risk of lightning strokes		■ Buildings protected by a lightning protection system ■ Mountainous or humid regions ■ Regions with high keraunic level	–	–	■	■	■
Atmosphere							
Ambient temperature which could be less than -5°C		–	–	■	■	■	■
Severe environments whose code varies between AF2 and AF4 according to IEC 60364-5-51		■ Indoor swimming pools ■ Yacht harbours, marinas, camping grounds ■ Water treatment ■ Chemical industries, heavy industries, paper mills ■ Mines and cellars, road tunnels ■ Markets, stock raising, food processing industries	–	–	■ (1)	–	–

(1) Atmospheres with high concentrations of chemicals or dust: see tables 1 and 2 in the CA908015E catalog module for description of corrosive atmosphere classes and appropriate additional protection.

Selectivity

Residual current devices of average sensitivity (100 mA and more) are available in a selective (S) and delayed (R) version.
This option ensures that, in the event of an earth fault downstream of the installation, only the defective part is switched off.
The table below shows (in green) which upstream/downstream equipment combinations provide this selectivity.



Sensitivity (mA) - Downstream		Sensitivity (mA) - Upstream												
		Instantaneous						Selective S					Delayed R	
		30	100	300	500	1000	3000	100	300	500	1000	3000	1000	3000

Inc: rated conditional short-circuit current
Value of the alternating component of the prospective current that a residual current circuit breaker protected by an appropriate short-circuit protective device (SCPD) mounted in series can withstand in specified conditions of use.

IΔc: rated residual short-circuit current
Value of the alternating component of the prospective residual current that a residual current circuit breaker protected by an appropriate short-circuit protective device (SCPD) mounted in series can withstand in specified conditions of use.

Im: rated making and breaking capacity
Value of the alternating component of the prospective current that a residual current circuit breaker is capable of establishing or interrupting in specified conditions of use.

IΔm: rated making and breaking capacity
Value of the alternating component of the prospective residual current that a residual current circuit breaker is capable of establishing and withstanding during its opening time and interrupting in specified conditions of use and behaviour.

SCPD
Short-circuit protective device (a fuse in the case of our markings): this is the max. fuse that can be used to resist the value Inc = IΔc.

- The iID double tunnel terminals residual current circuit breakers provide:
  - protection of persons against electric shock by direct contact (≤ 30 mA),
  - protection of persons against electric shock by indirect contact (≥ 100 mA),
  - protection of installations against the risk of fire (300 mA).

The **SI** type provides increased immunity from electrical interference and polluted or corrosive environments.

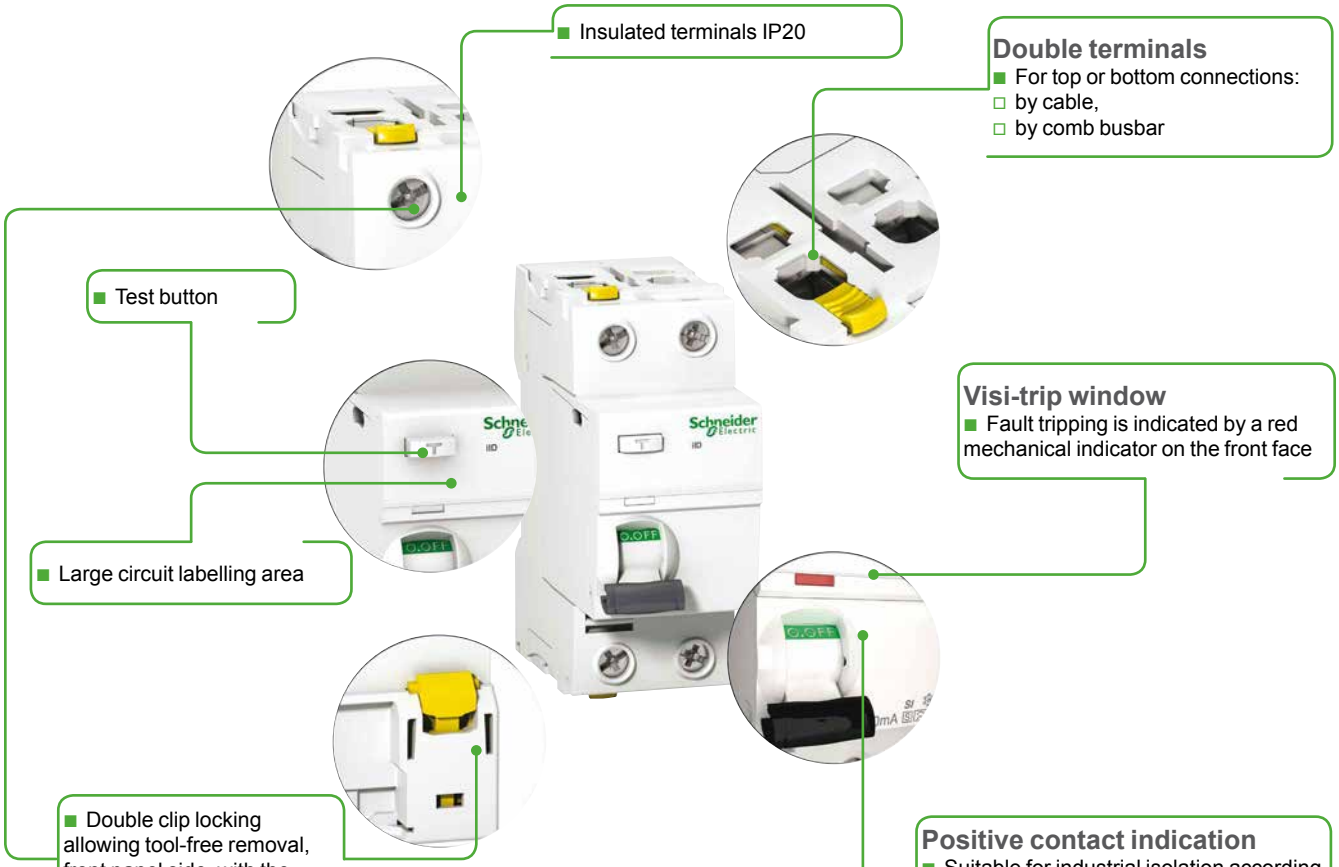
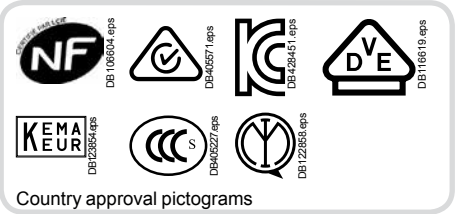
PB107413-60



SI type

The **SI** type provides increased immunity from electrical interference and polluted or corrosive environments.

Acti9 iID B-SI type residual current circuit breakers (RCCB)



Country approval pictograms

IEC/EN 61008-2-1
IEC/EN 62423
IEC 61543
VDE 0664

As per the above standards:
- The Acti9 iID B-SI type residual current circuit breakers provide:
  - protection of persons against electric shock by direct contact (30 mA),
  - protection of persons against electric shock by indirect contact (≥ 300 mA),
  - protection of installations against the risk of fire (300 mA or 500 mA).

B-SI type
The Acti9 iID B-SI type residual current circuit breakers provide:
- protection in the event of a continuous earth fault current on networks generated by:
  - controllers and variable speed drives,
  - battery chargers and inverters, such as used in photovoltaic application,
  - backed-up power supplies.
- They include protection against earth fault currents:
  - sinusoidal AC residual currents (AC type),
  - pulsed DC residual currents (A type),
  - multi frequency residual current (F type).
- The use of Acti9 iID B-SI type residual current circuit breaker can be made mandatory, according to standards applicable in country.
- For applications using 3-poles drives, such as:
  - crane,
  - lift,
  - HVAC,
  - pumping system.

B type is needed.

For more information, see earth leakage protection guide CA908066E.

- The Acti9 iID B-SI type works optimally with the variable speed drives manufactured by Schneider Electric, even with a long cable length between motor and variable speed drive (up to 50 m).
- **SI** technology is embedded in Acti9 iID B-SI type residual current circuit breaker, providing increased immunity from electrical interference and polluted environments.
- The Acti9 iID B-SI type is compatible with Schneider Electric AC and A types wired in parallel or in series in the installation, following coordination tables (refer to earth leakage protection guide CA908066E).

PB100572-18

16939

As per the above standards:
- The RCCB-ID 125 A residual current circuit breakers provide:
- protection of persons against electric shock by direct contact (30 mA),
- protection of persons against electric shock by indirect contact (⩾ 100 mA),
- protection of installations against the risk of fire (300 mA or 500 mA).

The **SI** type provides increased immunity from electrical interference and polluted or corrosive environments.

B type
- The RCCB-ID B type residual current circuit breakers provide specific protection of three-phase installations and people even in the presence of DC fault currents on the network generated by:
- 3-poles controllers and variable speed drives,
- 3-poles battery chargers and inverters,
- 3-poles backed-up power supplies.

Instantaneous
It ensures instantaneous tripping (without time delay).

Selective S
It ensures total discrimination with a non-selective RCD placed downstream.

OFsp auxiliary
- Electrical indication: by OFsp auxiliary mounted to the left, it has a double changeover switch indicating the "open" or "closed" position of the RCCB-ID 125 A.

Accessories
- 2P and 4P sealable screw shield.

Country approval pictograms

IEC/EN 61009-2-1

As per the above standard:
The residual current devices offer the following earth leakage protection functions:
- ☐ protection of persons against electric shock by direct contact (30 mA),
- ☐ protection of persons against electric shock by indirect contact (300 mA),
- ☐ protection of installations against the risk of fire (300 mA)
- ■ Circuit protection is ensured by a circuit breaker associated to the Vigi add-on.

A-SI type

The A-SI type provides increased immunity from electrical interference and polluted or corrosive environments.

DB123430

Country approval pictograms

EN 61009

When a Vigi C120 device is combined with a C120 circuit breaker, it provides the following functions:
- protection of persons against electric shock by direct contact (30 mA),
- protection of persons against electric shock by indirect contact (≥ 300 mA),
- protection of installations against fire hazards (300 mA to 1000 mA).

Special feature of type A-SI :
They are appropriate for operating in environments with:
- high risk of nuisance tripping: frequent lightning strikes, IT system, presence of electronic ballasts, frequency converters, presence of switchgear incorporating lighting type interference filters, computer system, etc.
- blind sources:
  - presence of harmonics or high frequency rejections
  - presence of DC components: diodes, diode bridges, switch-mode power supplies, etc.
- protected against nuisance tripping caused by transient voltage surges (lightning strike, operation of switchgear on the network, etc.)

□ protection of installations against fire risks (300 mA or 500 mA).

SI types are appropriate for operating in environments with:
■ High risk of nuisance tripping: frequent lightning strikes, IT system, presence of electronic ballasts, frequency converters, presence of switchgear incorporating lighting type interference filters, computer system, etc.
■ Blind sources
□ presence of harmonics or high frequency rejections,
□ presence of DC components: diodes, diode bridges, switch-mode power supplies, etc.
■ Protected against nuisance tripping caused by transient voltage surges (lightning strike, operation of switchgear on the network, etc.).

Technical data

Main characteristics		
Insulation voltage (Ui)		690 V
Pollution degree		3
Rated impulse withstand voltage (Uimp)		8 kV
According to IEC/EN 61009-1		
Surge current withstand (8/20 µs) without tripping	Selective Ⓢ or R	5 kÂ
	Instantaneous	3 kÂ
Behaviour in case of voltage drop		Residual current protection down to 0 V according to IEC/EN 61009-1 § 3.3.8
Additional characteristics		
Degree of protection	Device only	IP20
	Device in modular enclosure	IP40
Operating temperature	AC type	-5°C to +60°C
	A and SI types -25°C	-25°C to +60°C
Storage temperature		-40°C to +85°C
Additional characteristics		
Vigi 125 A and adjustable		
Plug-in auxiliaries	MXV	Remote tripping
	SDV	Indication of tripping upon earth fault
Adjustable Vigi		
Sensitivity adjustable by notch (IΔn)		300, 500, 1000, 3000 mA
Tripping time	Instantaneous	
	Selective Ⓢ	60 ms
	Time-delayed	150 ms
Leakage current indication on 3P and 4P 300...3000 I/S/R (pre-alarm)		On front face by LED
		Remote, by potential-free normally-open contact 250 V - 1 A (low level)
		Threshold setting by potentiometer from 10 % to 50 % of IΔn
Disconnection essential for dielectric test		By integral pushbutton

■ Test button

Vigi 125 A and adjustable
■ **MXV** remote tripping auxiliary

Vigi 125 A and adjustable
■ Auxiliary for electrical indication of tripping upon earth fault: **SDV**

■ Earth fault indicator light

■ Mechanical indication of earth fault

Vigi 125 A adjustable
■ Disconnection (essential) for dielectric test by integral pushbutton

3P, 4P
■ Device for unlocking on DIN rail on front face

■ Rigid connections isolated by supplied wire cover

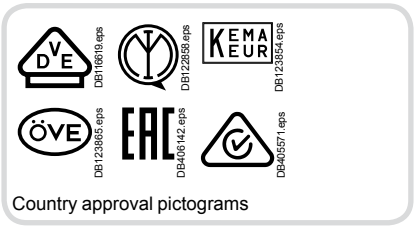
■ Insulated terminals IP20

■ Alert threshold setting
■ Setting of tripping threshold IΔn
■ Setting of time delay

SI type

SI types are appropriate for operating in environments with:
■ High risk of nuisance tripping: frequent lightning strikes, IT system, presence of electronic ballasts, frequency converters, presence of switchgear incorporating lighting type interference filters, computer system, etc.
■ Blind sources
□ presence of harmonics or high frequency rejections,
□ presence of DC components: diodes, diode bridges, switch-mode power supplies, etc.
■ Protected against nuisance tripping caused by transient voltage surges (lightning strike, operation of switchgear on the network, etc.).

Protection,
Earth leakage protection
Acti9 iCV40N residual current devices RCBO
6000 A



Country approval pictograms

CEI/EN 61009-2-1

As per the above standard:
The residual current devices offers the following functions of earth leakage protection and circuit protection.
- ■ Earth leakage protection:
- □ protection of persons against electric shock by direct contact (≤ 30 mA),
- □ protection of persons against electric shock by indirect contact (300 mA),
- □ protection of installations against the risk of fire (300 mA).
- ■ Circuit protection:
- □ circuit protection against short-circuit currents,
- □ circuit protection against overload currents,
- □ disconnection.

A-SI type
The A-SI type provides increased immunity from electrical interference and polluted or corrosive environments.

■ Automatic cable guiding in the correct position: terminals with guard

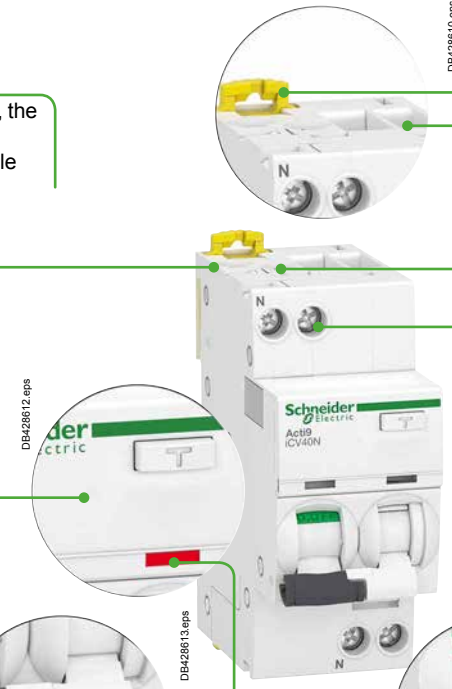
■ Reinforced cable pull-out strength: serrated terminals

■ Assembly and disassembly with comb busbar in place by operating toggle latches at the top and bottom of the products

■ Where there is a comb tooth, the connection of cables of cross section 16 mm² remains possible

■ Clear space to allow comb busbar installation

■ Insulated terminals IP20



Markings
■ Area for marking by 12 mm high label on the front panel

Markings
■ Area for 4 marking clips alongside the downstream terminal

VISI-TRIP window
■ Fault tripping is indicated by a red mechanical indicator on the front face

VISI-SAFE window
Positive contact indication
■ A green strip on the toggle indicates full opening of all the poles
■ Downstream maintenance operations can be carried out in better safety conditions
■ Padlocking possible

Connection

■ REDs 2P, 4P: supply from above or below

The REDs and the REDtest, **RE**sidual current **D**evice recloser, is made up of a residual current device and a recloser.
The **REDs** and **REDtest** **REsidual current Devices** offer the following functions:
- protection of people against direct and indirect contacts
- protection of installations against insulation faults
- disconnection of on-load electric circuits, already protected against overloads and short-circuits
- automatic restart after insulation monitoring of the downstream circuit.

REDtest provides the following additional functions:
- automatic and periodical test of the device, without breaking downstream circuit (REDtest).

Only used on TT and TN-S earthing grounding systems.

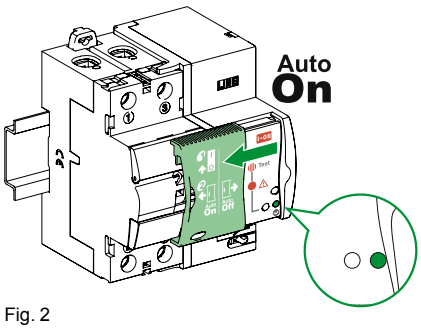

Fig. 2

Operation

REDs

The REDs operates in the residual current device mode, without automatic restart, when the sliding cover is open, i.e. to the right in the Auto Off position (Fig. 1).

The automatic restart mode and the Autotest are activated, when the sliding cover is closed, i.e. to the left in the Auto On position (Fig. 2).

Test

⚠ **This is only possible in manual mode, i.e. sliding cover open in the Auto Off position. You can then manually test the device by pressing the Test key.**
The downstream installation is then temporarily broken. You must then manually reclose the RED by activating the O-I lever to power supply the downstream circuit.

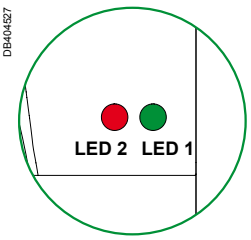
REDtest

■ **The REDtest carries out automatic testing of earth leakage protection every months.**
The test consists in opening and reclosing the REDtest, during which time continuity of supply of the downstream installation is guaranteed.
Autotest: after checking installation insulation, the REDtest monitors its residual current device, without breaking the downstream power supply (bypass by bypass contact).

REDs, REDtest (cont.)

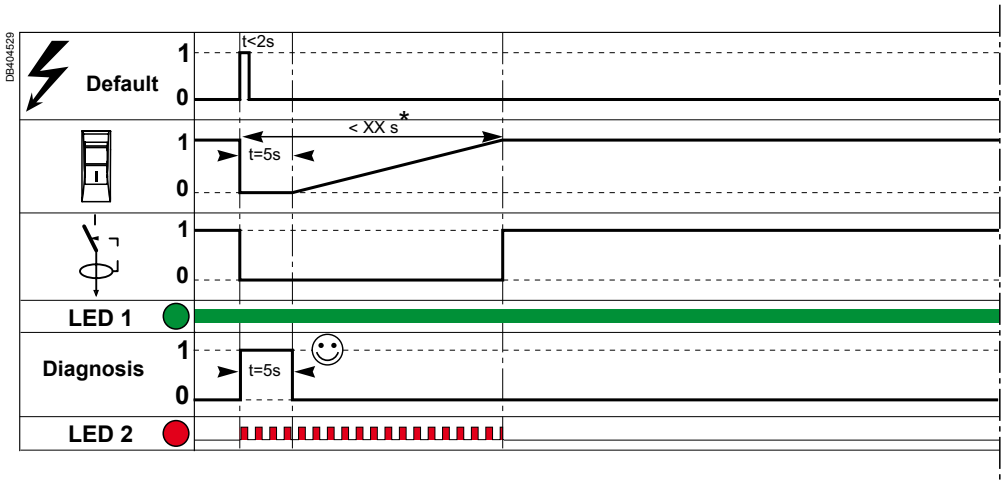
Operation ON mode: temporary network fault

REDs, REDtest



(*) Reclosing time:

REDtest	2P:	10 s
REDs	2P:	90 s
REDs	4P:	10 s



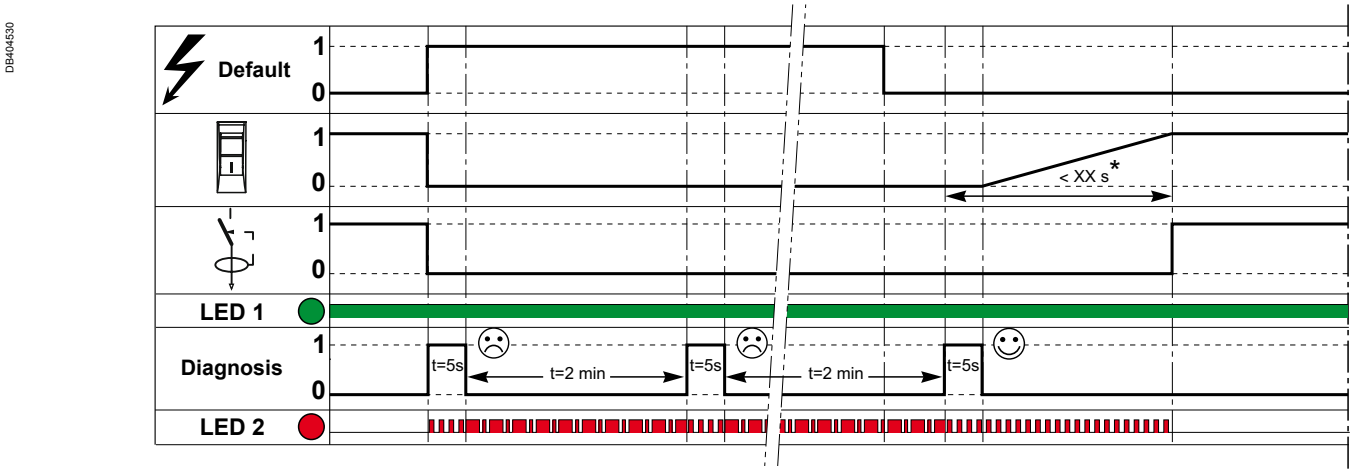
The built-in automatic recloser automatically recloses the residual current device after checking insulation of the downstream circuit.
Rd: lower level of insulation resistance, if R<Rd = no reclose
Rdo: higher level of insulation resistance, if Rd>Rdo = reclose

Operation ON mode: long network fault

REDs

If the circuit is faulty, the switch is prohibited from reclosing. After a time delay of 2 minutes, the downstream circuit insulation is rechecked.
There are then two possibilities:
- the installation is still faulty (the resistance to earth is lower than Rd): in this case a new check will be carried out in 2 minutes.
- the fault was temporary and has disappeared (the resistance to earth is higher than Rdo): the recloser automatically recloses the REDs.

IΔn	30 mA	300 mA
Rd	16 kΩ	5 kΩ
Rdo	8 kΩ	2.5 kΩ



(*) Reclosing time:

REDs	2P:	90 s
REDs	4P:	10 s

REDs, REDtest (cont.)

Operation ON mode: long network fault (cont.)

REDtest

If the circuit is faulty for a length of time "greater than 5 seconds", the switch is prohibited from reclosing.

- The installation is faulty: the earth resistance is lower than Rd.

IΔn	30 mA
Rd	70 kΩ
Rdo	20 kΩ

Arc fault detection circuit breaker iDPN N Arc

DB116619

Country approval pictograms

PB115631-50

The iDPN N Arc is an arc fault detection device with protection against overload and short-circuit currents, which aims to reduce the risk of electrical fire.
By continuously analyzing a large number of electrical parameters, it detects the appearance of electric arcs that are responsible for starting fires. It isolates the circuit concerned which reduces flame appearance occurrence.

The European installation standard IEC 60364- 4-42, recommends the use of AFDD to protect against arc fault in final circuit:
· in locations with sleeping accommodations (e.g., hotels, nursing homes, bedrooms in homes)
· in locations with risks of fire due to high quantities of flammable materials (e.g., barns, wood-working shops, stores of combustible materials)
· in locations with combustible constructional materials (e.g., wooden buildings)
· in fire propagating structures (e.g. high rise buildings)
· in locations where irreplaceable goods are housed (e.g., museums).

More specifically, the installation of iDPN N Arc is highly recommended to protect circuits with highest risk of fire, such as:
· protruding cables (risk of knocks)
· outside cables (greater risk of deterioration)
· unprotected cables in secluded areas (like storage rooms)
· aging, deteriorating wiring or wiring for which the connection boxes are inaccessible.

iDPN N Arc must not be installed on circuits requiring high level of continuity of service.

The iDPN N Arc is not compatible with ATEX regulations.

IEC 60898-1

Circuit breakers for the protection against the overload (residential and similar installations).

IEC/EN 62606

General requirements for arc detection devices.

■ In addition to protection against overloads and short circuits, the iDPN N Arc monitors for electric arcs that occur in cables and connections, that may cause a fire. These arcs are the result of localised cable deterioration or loose connections.
■ It is used for three types of situations that can result in a fire:
□ parallel arc: insulation problems between two live conductors that cause a resistive short-circuit, too weak to be detected by a circuit breaker and with no earth leakage to be detected by a residual current circuit breaker,
□ series arc: a damaged conductor or connection that causes part of the current to flow through its carbonised insulation due to a local rise in temperature,
□ overheating of electronic components in loads, when exposed to an overvoltage for several seconds.

■ It combines the following functions:
□ circuit protection against overload and short-circuit currents (circuit breaker function),
□ protection against fire hazards by detection of abnormal electric arcs,
□ protection against load fire hazards due to slow overvoltages (network overvoltage),
□ fire hazard tripping indication via the front panel indicator,
□ device self-diagnostics via the test button,
□ positive contact indication (green strip).

■ The iDPN N Arc should be installed in the place of the circuit's final protection device.

iPRF1 12.5r/PRD1 35r/PRD1 25r/PRD1 Master

Type 1 and 2 LV surge arresters

The Type 1 range of surge arresters meets the normative withstand capability of current wave type 10/350 µs (8/20 µs for Type 2 surge arresters).
It is suitable for use with TT, TN-S, TN-C and IT earthing connection systems (neutral point connection).
In addition, the PRD1 35r surge arrester covers the 400 V IT system.
iPRF1 12.5r and PRD1 surge arresters are fitted with a remote transfer contact to send "end-of-life indication" information.
PRD1 surge arresters are fitted with easy-to-replace withdrawable cartridges.

iPRF1 12.5r/PRD1 35r/PRD1 25r/PRD1 Master

The Type 1 surge arrester is recommended for electrical installations in the service sector and industrial buildings protected by a lightning conductor or by a meshed cage.
It protects electrical installations against direct lightning strikes.
It is used to conduct the direct lightning current, propagating from the earth conductor to the network conductors.
It must be installed with an upstream disconnection device, such as a fuse or circuit-breaker, whose breaking capacity must be at least equal to the maximum prospective short-circuit current at the installation point.
iPRF1 12.5r and PRD1 25r surge arresters also provide Type 2 protection and protect the electrical installation by finely clipping the lightning wave overvoltages.

iPF surge arresters

Type 2 or 3 LV surge arresters

The iPF multi-pole single-piece surge arrester range is adapted for earthing systems: TT, TN-S, TN-C.
Type 2 surge arresters are tested with a 8/20 µs current wave.
Type 3 surge arresters are tested with a 12/50 µs and 8/20 µs combined wave.

Each surge arrester in the range has a specific application:

- **incoming protection (type 2):**
  - the iPF65(r) is recommended for a very high risk level (strongly exposed site)
  - the iPF40(r) is recommended for a high risk level
  - the iPF20 is recommended for a medium risk level
- **secondary protection (type 2 or 3):**
  - the iPF8 ensures secondary protection of loads to be protected and is placed in cascade with the incoming surge arresters. This surge arrester is required when the loads to be protected are at a distance of more than 10 m from the incoming surge arrester.

The iPF surge arresters with “r” indication have remote transfer of the information: “surge arrester to be replaced”.

Country approval pictograms

iPRD withdrawable surge arresters allow quick replacement of damaged cartridges.
Type 2 surge arresters are tested with a 8/20 µs current wave.
Type 3 surge arresters are tested with a 1.2/50 µs and 8/20 µs combined wave.

Each surge arrester in the range has a specific application:
- ■ **incoming protection (type 2):**
  - □ the iPRD65r is recommended for a very high risk level (strongly exposed site)
  - □ the iPRD40(r) is recommended for a high risk level
  - □ the iPRD20(r) is recommended for a medium risk level
- ■ **secondary protection (type 2 or 3):**
  - □ the iPRD8(r) ensures secondary protection of loads to be protected and is placed in cascade with the incoming surge arresters. This surge arrester is required when the loads to be protected are at a distance of more than 10 m from the incoming surge arrester.

The iPRD surge arresters with “r” indication have remote transfer of the information: “cartridge to be replaced”.

iPRC, iPRI surge arresters

Country approval pictograms

Protection against overvoltages related to lightning strikes.

Analogue telephone line protection: the iPRC surge arrester wired in series to the private installation input protects the telephones, the PABX, the modems (including ADSL), etc.

Protection for 2 low-current lines without common potential or 4 lines with common reference potential: the iPRI protects the measuring instrument and PLC "sensor" inputs and the DC power supply inputs up to 53 V and AC power supply inputs up to 37 V.
The input current must not exceed 300 mA.

Acti9 iPRE surge arrester

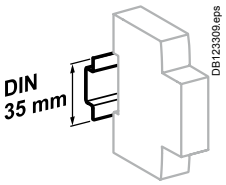
Surge arrester for Ethernet RJ45 sockets

CE IEC

Country approval pictograms

Fine surge protection of Ethernet line Cat. 6

iPRE



Clip on DIN rail 35 mm.

IEC/EN 61643-21

As per the above standard:
iPRE Ethernet line protection
The Acti9 iPRE RJ45 surge arrester protects the Internet line for residential, buildings and industry applications.
Telecommunication equipment are very exposed to lightning overvoltages as they often have long cables which behave like antennas to such surge lightnings and electrostatic discharges created by switching transients in buildings. The interfaces operate with low signal levels at high frequencies. This makes them particularly sensitive to surge voltages and can lead to the destruction of IT systems.
Short response times are essential to quickly limit the surge voltages without deteriorating signal quality. Wired in series to the private installation input, it allows better data exchange between computers and peripheral devices.

- Acti9 iPRE is suitable for category 5 & 6 Ethernet cabling system, high speed data networks up to 250 MHz.
- Acti9 iPRE is delivered with an earthing cable which provides protective grounding in computer rooms.
- Acti9 iPRE is DIN rail mounted.
- RJ45 system-specific connection.

iPRD 40r 800PV

iPRD PV-DC direct current surge arresters are designed to protect against overvoltages due to a lightning strike: of the "DC" input to the inverter and of photovoltaic panels.

It should be installed in a switchboard inside the building. If the switchboard is located outside, it must be weatherproof.

Withdrawable iPRD PV-DC surge arresters allow damaged cartridges to be replaced quickly.
The surge arrester base can be turned over to allow the phase/neutral/earth cables to enter through either the top or the bottom
They offer remote reporting of the "cartridge must be changed" message.

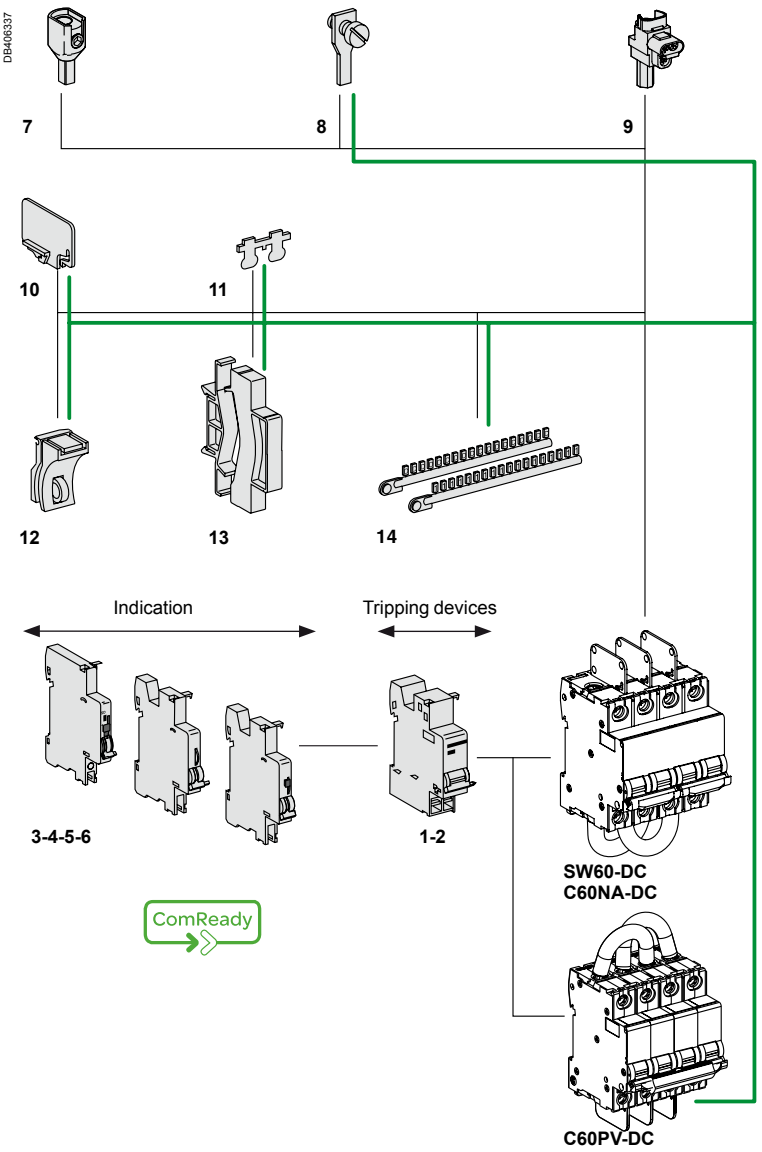
6	OF+SD/OF auxiliary contact (OF+SD or OF+OF combination switch)		**A9N26929**

Tripping			
1	MN, MNx, MNS undervoltage release	**See module**	**CA907008**
2	MX, MX + OF shunt release	**See module**	**CA907008**



Tripping devices must be installed first.
If two tripping devices are used: the MN must be installed first
Indication auxiliaries: respect specified position for SD functions.

Assembly rule

The mounting order and the number for the various auxiliaries must be complied with.
The tripping auxiliaries MN, MX...) should be mounted first 1 as close as possible to the main device.
Then at the left, the indicating auxiliaries (OF, SD) should be mounted 2 then 3 complying with the following association table.

Indicating auxiliaries		Indicating auxiliaries	Device
3	+2	+1	
1 (OF+SD/OF or OF+SD24)	1 OF+SD/OF	1 (MN, MNx, MNS or MX, MX+OF)	SW60-DC, C60NA-DC, C60PV-DC
1 OF	1 (OF+SD/OF or SD or OF)	2 (MN, MNx, MNS or MX, MX+OF)	
–	1 OF+SD24	2 (MN, MNx, MNS or MX, MX+OF)

Acti9 VDIS vertical distribution blocks 125 A

A9XPK707

A9XPK714

IEC/EN 60947-7-1
IEC/EN 61439-2

As per the above standards:

Description

- 4P distribution blocks with quick connections.
- Designed for both rigid cables and flexible cables with or without ferrules.
- Push-in technology.
- Optimised installation in Pragma 24 (surface mounting), Resi9 24 (surface mounting), Prisma G and Prisma Pack.
- Only two versions to cover all configurations.

Technical data

Number of poles		4P	4P
Operating current at 40°C	(Ie)	125 A	125 A
Operating voltage	(Ue)	250/440 V AC	250/440 V AC
Operating frequency		50/60 Hz	50/60 Hz
Rated insulation voltage	(Ui)	500 V AC	500 V AC
Rated impulse withstand voltage	(Uimp)	6 kV	6 kV
Rated peak withstand current at 20 ms	(Ipk)	20 kÂ	20 kÂ
Rated conditional short-circuit current withstand	(Isc)	Up to breaking capacity of Schneider Electric outgoing circuit breakers, Acti9 iC60 and Acti9 iC40, even when reinforced by cascading implementation	
Pollution degree		3	3
Degree of protection		IPxxB	IPxxB
Total connection capacity at outgoing terminals		7 for each phase 12 for neutral	14 for each phase 24 for neutral
Weight (g)		1140	2040

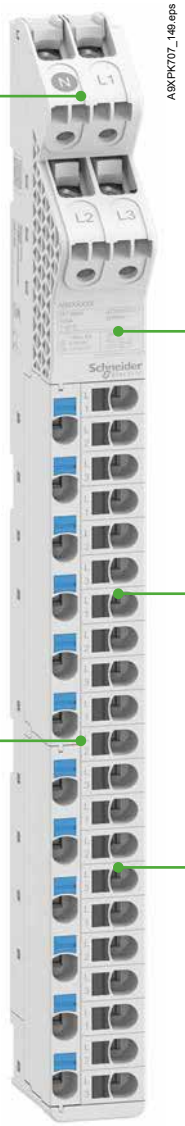
Acti9 VDIS vertical distribution blocks 125 A

Advantages

- High reliability of cabling thanks to spring terminals.
- Fast and simplified distribution thanks to a direct and frontal access to head of groups and groups of devices.
- Space release on Din Rail thanks to side installation.
- Time saving thanks to screwless and push-in technology.
- Easy phase balancing.
- Easy extensions and modifications.
- Numerous Ph+N load connections.

Power supply

- Four-poles tunnel terminals with screw clamping
- Cable per connection point:
  - flexible from 10 to 35 mm²
  - flexible with insulated ferrule from 10 to 35 mm²
  - stranded from 10 to 35 mm²

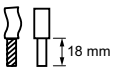


Installation

- Clip-on directly in Pragma supports, locking clips included
- Clip-on in Prisma vertical mounting accessories A9XPKV04

Stripping length

- Rigid or flexible



Distribution connections

- Connection to spring terminals through the front
- A single cable per connection point:
  - rigid from 1.5 to 10 mm²
  - stranded from 4 to 16 mm²
  - flexible from 1.5 to 16 mm²
  - flexible with ferrule from 1.5 to 16 mm²
- Push-in spring for toolless connection for both rigid and flexible cables with ferrules
- Maintenance free
- Connections:
  - A9XPK707: 7 per phase, 12 neutral
  - A9XPK714: 14 per phase, 24 neutral

Flexible with ferrule

⚠ CAUTION

INCOMPATIBILITY BETWEEN TWO-POLE COMB BUSBARS AND FOUR-POLE DEVICES
- Never connect a two-pole comb busbar to a four-pole device, as this will result in a multi-phase bolted short circuit.
- Always check that the head of group circuit breaker is in good working condition before connecting a comb busbar.

Failure to follow these instructions can result in injury or equipment damage.

Technical data

Operating current (Ie) at 40°C	100 A
Short circuit current (Isc)	Compatible with the breaking capacity of Schneider Electric circuit breakers
Rated insulation voltage (Ui)	500 V AC
Operating voltage (Ue)	415 V AC
Pollution degree	3
Fire resistance IEC 60695-2-1	Self-extinguishing at 960°C 30 secondes
Color	RAL9003

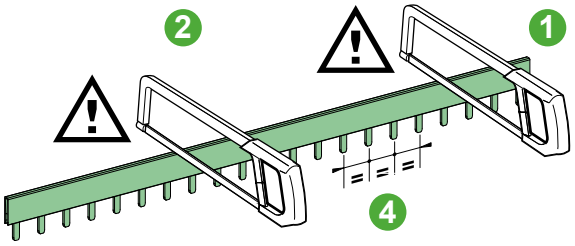
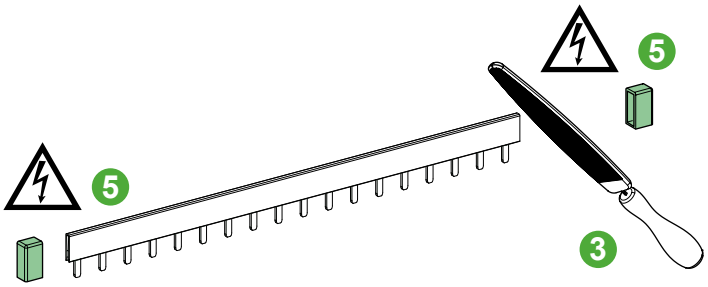
Comb busbar assembly recommendation
Acti9

Cutting to length

DB406700



DB406701

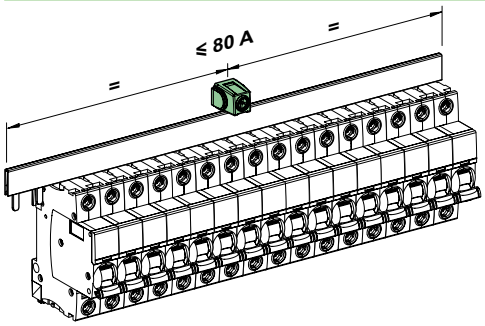


1- Cut perpendicularly (no angle > 10°) to the desired length using a circular miter saw for cutting metals.
2- Maintain the direction of cutting from left to right.
If this recommendation is not complied with, the copper busbar holding system is no longer active.

3- It is recommended to deburr after cutting.
4- Check the regularity of the teeth spacing. Do not extract the copper terminals.
5- **Mandatory end-pieces after cutting the comb busbar.**

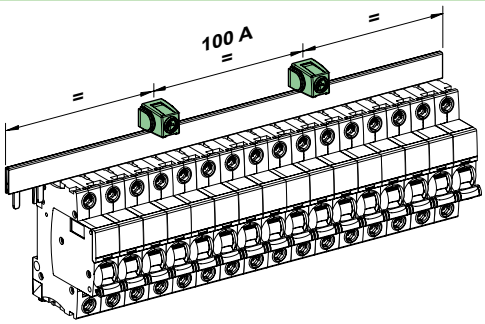
Direct power supply

DB406702



- Power supply ≤ 80 A by 1 connection point.
- Preferably choose the center of the comb busbar.

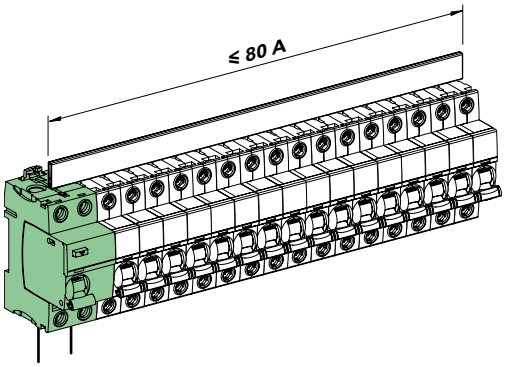
DB406703



- 100 A power supply by 2 connection points mandatory.

Power supply by iID "group feeder" ≤ 80 A

DB409159

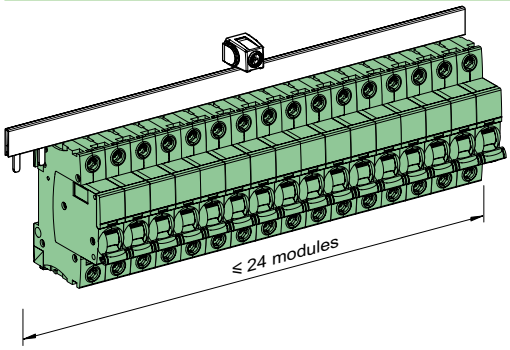


- RCCB "group feeder" ≤ 80 A: direct power supply by the RCCB.

Comb busbar assembly recommendation
Acti9 (cont.)

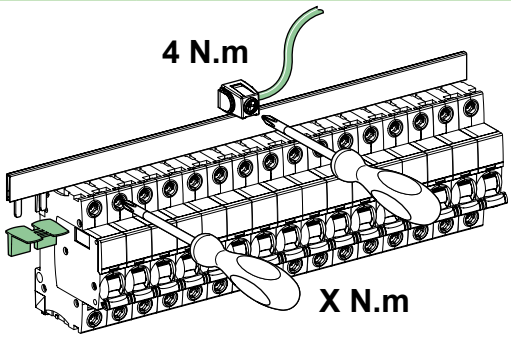
General

DB406704



- The quantity of products is not infinite, after 24 modules it is not possible to guarantee assembly.

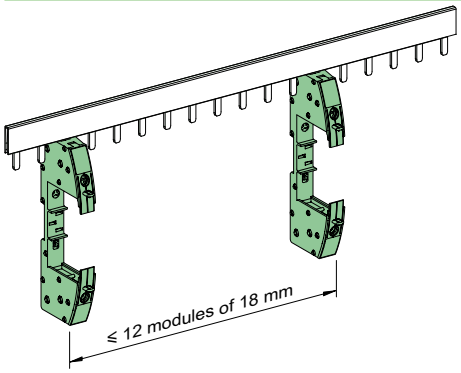
DB406705



- Tightening to the recommended torque.
- Avoid tinning on the cable terminations, since tin has high resistivity.
- The comb teeth left unassigned should be isolated with tooth-cover end-pieces.

Plug-in base

DB409878



- Special case: plug-in base (Cat. no. A9A27003), ≤ 12 x 18 mm modules.

⚠ CAUTION

INCOMPATIBILITY BETWEEN 1P+N COMB BUSBARS AND 3P+N DEVICES
- Never connect a 1P+N comb busbar to a 3P+N device, as this will result in a multi-phase bolted short circuit.
- Always check that the head of group circuit breaker is in good working condition before connecting a comb busbar.

Failure to follow these instructions can result in injury or equipment damage.

Quick distribution blocks

PB104499-7.eps

PB111415-19_r.eps

IEC 60947-7-1, IEC 61439-2

Description

- Downstream circuits are connected from the front, to spring terminals.
- Contact pressure automatically adapts to the size of the conductor.
- Contacts are insensitive to vibrations and thermal variations.
- Only one cable (flexible or rigid) can be inserted per terminal.

Quick distribution blocks

PB111254-30_1.eps

PB111253-30_1.eps

IEC/EN 60947-7-1, IEC/EN 61439-1 & 2

Description

- Single-pole or four-pole distribution block that can be installed on a standard DIN rail or on a mounting plate.
- Compatible with Prisma G and P, Pragma, Mini Pragma and Resbo series switchboards.
- Incomers and feeders are connected to screw terminals that accept rigid or flexible cables with ferrule.
- Optional: additional neutral terminal strip for four-pole distribution block.

Advantages

- Simplified power supply for main incomers.
- Easy phase balancing.
- Easy, effortless cabling due to excellent accessibility.
- Visible cabling.
- Insulation between phases.
- The single-pole distribution blocks are adjacent and bridgeable via the second incoming hole for parallel connection.

Acti9 PowerTag Link

Country approval pictograms

A9XMWD20

Ethernet connection concentrator (Modbus TCP/IP) for wireless devices with data display web pages.
The associated PowerTag energy sensors allow alarms to be managed via email for terminal loads, and energy, power, current and voltage to be measured accurately in real time.
The associated PowerTag Control modules are designed to monitor a circuit and notify wirelessly to the concentrator the information status of a contact (OF, SD, CT or TL position indication...).
The entire system can easily be installed in existing LV equipments using Multi9/Acti9/Compact NSX type circuit breakers.

Data transmitted:
- Total and partial energy.
- Active power, apparent power, phase-to-phase and phase-to-neutral voltage.
- Currents I1, I2, I3.
- Power factor (cos phi).
- Voltage loss and overload information.
- Control order to a circuit.
- Information status of a contact.

Functions

Acti9 PowerTag Link permits:
- Concentration of PowerTag (covered ranges Acti9 iC40/iC60, Multi9 and Compact NSX) wireless energy sensor data.
- Ethernet connection via the RJ45 port.
- Load monitoring:
  - alarm sent by the energy sensor in the event of a voltage loss,
  - pre-alarms on predefined thresholds (50 %, 80 %) or customized thresholds (thresholds on currents, power, voltages and cumulative energies),
  - load running time counter,
  - power synthesis (kW).
- Alarm management on current/voltage/load level thresholds by e-mail.
- Send control orders to PowerTag Control output to operate a load remotely.
- Collect status of contact from PowerTag Control input.
- Display of alarms and pre-alarms on Acti9 PowerTag Link embedded web pages.
- Easy integration into system with Com'X 200, Com'X 510 and other Schneider Electric software and third-party Building Management Systems (BMS) thanks to EcoStruxure Power Commission report in pdf format. This report provides dynamically all the Modbus registers and associated meanings for an easy integration into the system.
- Remote metering capability using the Acti9 PowerTag Link monitoring page.

Installation

- On DIN rail (width 54 mm).
- 230 V AC power supply.

Testing and start-up

- Pairing of wireless devices must be performed via the EcoStruxure Power Commission software, freely available by downloading.
- The software makes it possible, in particular, to attribute to each circuit a name, a use and the current rating (useful for alarms).

Acti9 PowerTag Link C

Functions

Acti9 PowerTag Link C is a concentrator that connects the switchboard to the Facility Expert SB smartphone app. It permits:

- Load monitoring with PowerTag wireless energy sensors:
  - load state monitoring,
  - energy measurement.
- Temperature monitoring with PowerTag Ambient for Temperature.
- Sending of control orders to PowerTag Control output to operate a load remotely.
- Collection of status of contact from PowerTag Control input.
- Maximum of 20 wireless devices connected.

Configuration, testing and setup

- Connected devices are configured and communication is tested via the "mySchneider Electrician eSetup" app.

Technical characteristics

Power supply		
Rated		■ 110/230 V AC ± 15% ■ Non-isolated with protection against voltage reversals to -28.8 V⎓
Maximum input current		1.5 A
Voltage limit		19.2...28.8 V⎓ with ripple
Maximum inrush current		3 A
Overvoltage category		OVC III
No-load consumption		100 mA
Environmental characteristics		
Temperature	Operating (horizontal)	-25°C...+60°C
	Storage	-40°C...+85°C
Tropicalization		Treatment 2 (relative humidity: 93 % at 40°C)
Resistance to voltage dips		10 ms, class 3 as per IEC 61000-4-29
Degree of protection	Front panel	IP40
	Box	IP20
Degree of pollution		2
Compliance with SELV specifications		Yes
Altitude	Operating	0...2000 m
	Storage	0...3000 m
Vibration resistance	As per IEC 60068-2-6	1 g / ± 3.5 mm - 5 Hz to 300 Hz - 10 cycles
Shock resistance	As per IEC 60068-2-27	15 g / 11 ms
Immunity to electrostatic discharge	As per IEC 61000-4-2	■ Air: 8 kV ■ Contact: 4 kV
Immunity to radiated magnetic fields	As per IEC 61000-4-3	10 V/m - 80 MHz to 3 GHz
Immunity to fast transients	As per IEC 61000-4-4	■ 1 kV for Ethernet communication ■ 2 kV for 24 V⎓ power supply - 5 kHz - 100 kHz
Immunity to conducted magnetic fields	As per IEC 61000-4-6	10 V from 150 kHz to 80 MHz
Immunity to magnetic fields at mains frequency	As per IEC 61000-4-8	■ 30 A/m continuous ■ 100 A/m pulsed
Resistance to corrosive atmospheres	As per IEC 60721-3-3	Level 3C2 on H_2S / SO_2/ NO_2 / Cl_2
Fire resistance	For live parts	At 960°C 30 s / 30 s as per IEC 60 695-2-10 and IEC 60 695-2-11
	For other parts	At 650°C 30 s / 30 s as per IEC 60 695-2-10 and IEC 60 695-2-11
Salt spray mist	As per IEC 60068-2-52	Severity 2
Environment		In compliance with RoHS directives
Overvoltage	As per IEC 61000-4-5	■ Power supply: 0.5 kV ■ Ethernet: 1 kV
Conducted emissions	IEC 61131-2, CISPR	Class A: (0.15 to 30 MHz)
Radiated emissions	IEC 61131-2, CISPR	Class A: (30 to 1000 MHz)
Mean time between failures		More than 1 M hours
Additional characteristics		
Mounting position		Horizontal or vertical
Ethernet characteristics		
Type of interface module		Ethernet
Transmission	Ethernet	■ Transfer rate: 10/100 Mbit/s ■ Medium: straight shielded cable, STP or S/FTP, Cat 5e or 6, RJ45 connector
Turnaround time		1 ms
Maximum cable length		100 m
Type of bus connector		RJ45 (shielded)
Number of Ethernet ports		1
Radiofrequency characteristics		
Radio communication ISM band		2.4 to 2.4835 GHz
Number of channels		11 to 26 (IEEE 802.15.4)
Equivalent isotropically radiated power (EIRP)		0 dBm
Number of radiofrequency devices		Up to 20 PowerTag energy sensors
RF standard		ETSI / EN 300328 v2.1.1
		ETSI / EN 301489-17 v3.2.0

Acti9 Smartlink EL B

PB113286-modifie-66.eps

PB107797-44.eps

Functions

Acti9 Smartlink EL B is a gateway that connects the switchboard to the Facility Expert SB smartphone app.

- ■ Circuit breakers, residual current circuit breakers, residual current devices:
  - □ open/closed state,
  - □ tripped state.
- ■ Contactors, impulse relays:
  - □ opening control,
  - □ closing control,
  - □ open/closed state.
- ■ RCA remote control:
  - □ reset control after tripping,
  - □ open/closed state,
  - □ tripped state.
- ■ Pulse power meters:
  - □ number of pulses recorded,
  - □ pulse value setting (e.g. kWh).
- ■ Analogue sensors:
  - □ temperature sensor,
  - □ humidity sensor,
  - □ CO_2 detector,
  - □ etc.

When Acti9 Smartlink EL B is switched on and the Internet connection is available, communication automatically adjusts to Ethernet (Cloud) communication parameters.

DB428865-70.eps

Configuration, testing and setup

■ Connected devices are configured and communication and cabling are tested via the "mySchneider Electrician eSetup" app.

Country approval pictograms

PB107797-47

DB404502

ComReady

IEC/EN 61131-2

The Acti9 Smartlink SI B is an open system that remotely measures, balances, monitors and controls final distribution.

It is designed to fit into tertiary building projects and integrates perfectly in a Building Management System or an Energy Management System.

It consists of:
- a Modbus Slave version (Acti9 Smartlink Modbus)
- a Modbus Master version (Acti9 Smartlink SI B) with the following functions: radio hub, Modbus gateway and embedded web server: this provides web pages for configuring the system, and real-time monitoring of values (status of circuit breakers, energy meters, alarms and monitoring and control).

These modules transmit data to a PLC or monitoring system.

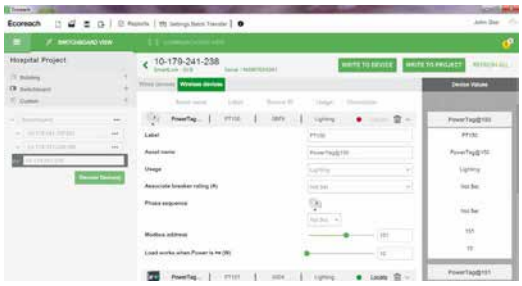
The system supports
- Alarm monitoring on current, voltage, power factor, tripping, power, consumption thresholds and their transmission by email.
- Monitoring and control via web pages of loads, energy and power by zone and by usage.
- Single access point for a full analysis of the status of switchboard power distribution (measurements, protection status, temperature, consumption, alarms, control and monitoring).

Functions

Transmission of data collected by Acti9 switchgear assemblies
- Circuit breakers, residual current circuit breakers and residual current devices:
  - open/closed state, tripped state,
  - number of opening/closing cycles,
  - number of tripping actions.
- Contactors, impulse relays, Reflex iC60:
  - opening and closing control,
  - open/closed state,
  - number of opening/closing cycles,
  - total period of operation of the load (device closed).
- Remote controlled circuit breaker/Reflex iC60:
  - opening control ,
  - closing control ,
  - contactor open/closed state,
  - circuit breaker open/closed state,
  - number of opening/closing cycles,
  - total period of operation of the load.
- Pulse meters (energy, water, gas, etc.):
  - number of pulses recorded,
  - pulse value setting (default: 10 Wh),
  - total consumption recorded,
  - possibility of resetting energy meters.
- Digital inputs/outputs.

Acti9 Smartlink SI B

DB429005



Functions (cont.)

Transmission of additional data collected by Acti9 Smartlink SI B

- Power meters (Modbus slaves).
- Analog sensors:
  - CO_2 sensor,
  - light sensor,
  - humidity sensor,
  - temperature sensor,
  - any 0..10 V or 4..20 mA compatible sensor.
- PowerTag wireless-communication energy sensors (Compact NSX, Acti9 iC60, iC40, DT60, DT40 ranges):
  - total and partial energy,
  - active power, phase-to-phase voltage, phase-to-neutral,
  - currents I1, I2, I3,
  - power factor,
  - voltage loss and overload information.
- Load monitoring:
  - alarm sent by the sensor in the event of a voltage loss,
  - pre-alarms on predefined thresholds (50 %, 80 %) or customized thresholds (thresholds on currents, power, voltages and cumulative energies),
  - load running time counter.
- Alarm management on current/voltage/load level thresholds by e-mail.
- Display of alarms and pre-alarms on Acti9 Smartlink SI B embedded web pages.
- Easy integration into any upper system using Com'X 210, Com'X 510 and other Schneider Electric software and third-party Building Management Systems (BMS's) thanks to the EcoStruxure Power Commission report in pdf format. A report provides dynamically all the Modbus registers and associated meanings for an easy integration into the system.
- Remote metering capability using the Acti9 Smartlink SI B monitoring page.

All the data are stored in memory: number of cycles, consumption, period of operation, even in the event of a power interruption.

Acti9 Smartlink can also exchange data with any device having 24 V DC digital inputs/outputs (e.g. low-level contacts 29452 for position of the Compact NSX). No configuration of the products connected to the Ti24 channels is required.

At power up, Acti9 Smartlink Modbus adapts automatically to the communication parameters of the Modbus master (PLC, supervisor, etc.).

Installation

- Assembly in switchboards:
  - width 24 modules per row,
  - minimum spacing between rails 150 mm.
- Mounting on:
  - DIN rail with mounting kit **A9XMFA04**,
  - Linergy FM 80 A, with bolts provided,
  - Linergy FM 200 A, with mounting kit **A9XM2B04**,
  - back of enclosure with mounting kit **A9XMBP02**,
- Installation in Pragma and Kaedra enclosures with mounting kit **A9XMVA01.**

Test

- The communication and cabling test on the connected devices can be performed using the EcoStruxure Power Commission software.

DB405140

Commissioning software: EcoStruxure Power Commission (*)

- Configuration and communication test of wired and wireless devices
- Editing of a complete test report (pdf) with the Modbus communication registers for easy integration into a supervision system
- Windows XP, Windows 7, Windows 8 and Windows 10 compatible
- Downloadable from: https://www.schneider-electric.com/ww/en/download/document/Ecoreach_Installer

(*): new name of Ecoreach software

Connectable devices

With Ti24 interface		
Type	**Reference**	**Description**
iACT24	A9C15924	Low-level control and indication auxiliary for iCT contactors
iATL24	A9C15424	Low-level control and indication auxiliary for iTL impulse relays
iOF+SD24	A9A26897 A9A26898	Low-level indication auxiliary for iC60, iID, ARA, RCA, iSW-NA
OF+SD24	A9N26899	Low-level indication auxiliary for C60, C120, DPN, RCCB/ID, C60H-DC
RCA iC60	See module CA904011	Remote control with Ti24 interface
Reflex iC60	See module CA904012	Reflex iC60 with Ti24 interface

Without Ti24 interface
Power meters with pulse output, e.g. iEM2000T
Pulse meters complying with the IEC 62053-21 standard
24 V DC indicator lamps, Harmony range type XVL
All loads not exceeding 100 mA, 24 V DC
Timers, thermostats, time switches, load shedding devices
All 24 V DC auxiliary contacts, IEC 61131-2 type 1

With Modbus connector systems
Power meters: iEM3150, iEM3250, iEM3350, iEM3155, iEM3255, iEM3355, all Modbus slave RS485 equipment

With wireless-communication systems
PowerTag energy sensors *. See catalog module CA907029E

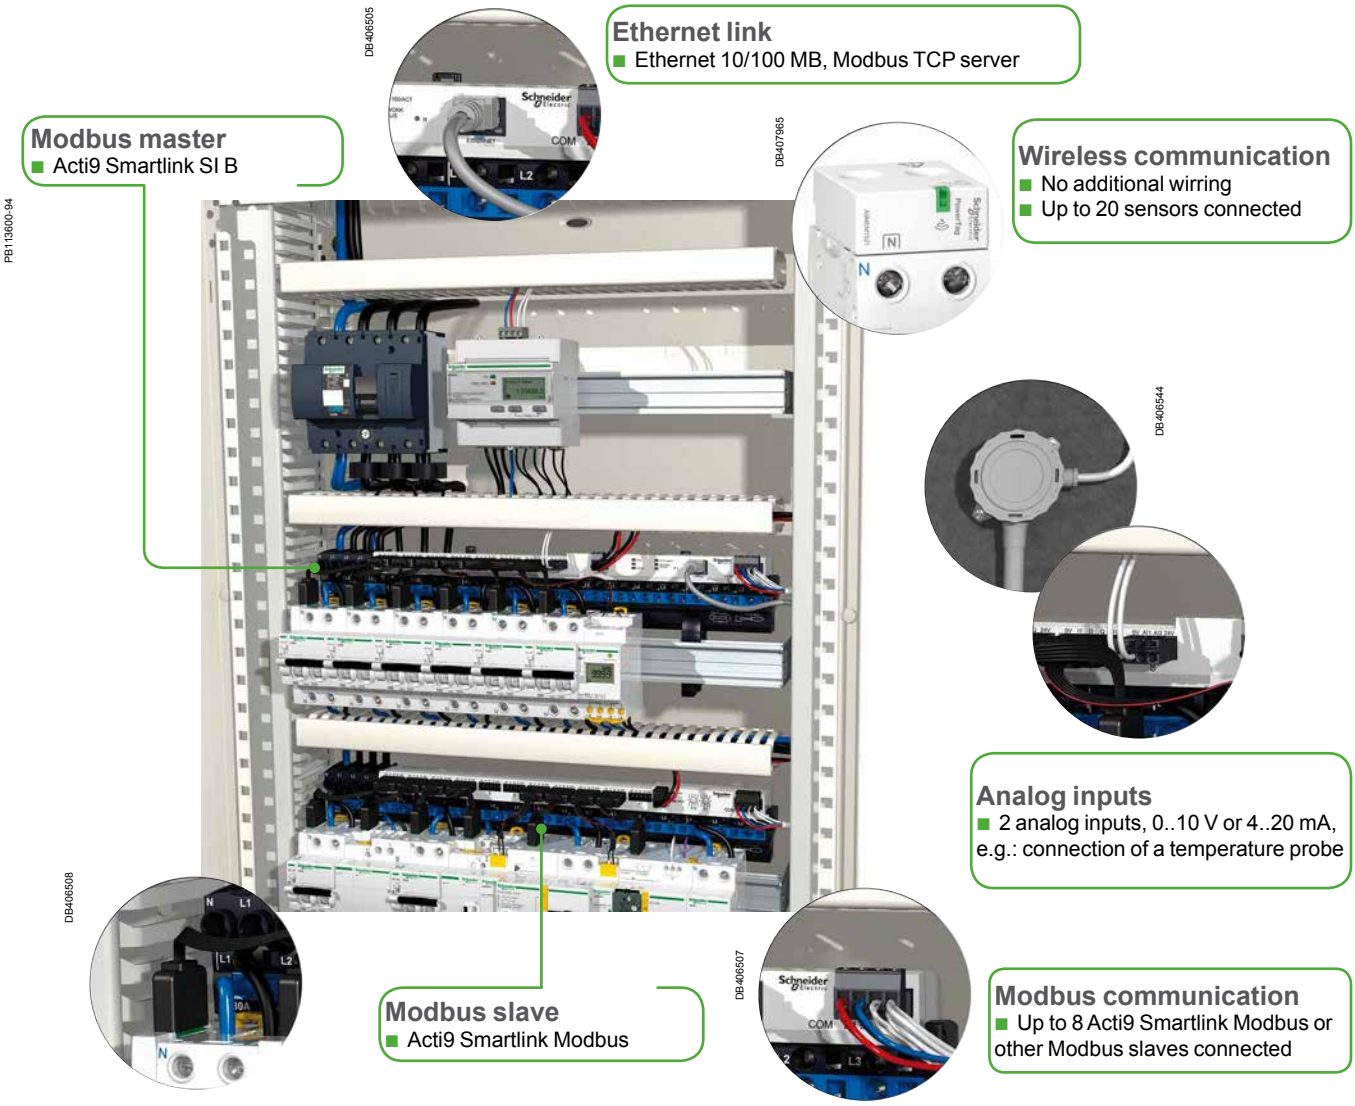
With analog outputs
Any 0...10 V and 4...20 mA compatible sensor (temperature, humidity, luminosity, etc.)

(*) for additional information and a list of Schneider Electric compatible devices, refer to the selection guide CA908058E.

PB115448-40

Acti9 Smartlink SI B (cont.)

Example of an installation



Ethernet link
- Ethernet 10/100 MB, Modbus TCP server

Modbus master
- Acti9 Smartlink SI B

Wireless communication
- No additional wirring
- Up to 20 sensors connected

Analog inputs
- 2 analog inputs, 0..10 V or 4..20 mA, e.g.: connection of a temperature probe

Modbus communication
- Up to 8 Acti9 Smartlink Modbus or other Modbus slaves connected

Modbus slave
- Acti9 Smartlink Modbus

Prefabricated cables
- Simplified and faster cabling

Ethernet network connection

Acti9 Smartlink SI B has an embedded Web server used to display data showing the state of circuit breakers, energy meters, power data, phase unbalance and current alarms.
Manual control is also possible via the Web page.

- The Web server sets the parameters of the connection to the network servers (SNTP, SMTP), as well as the parameters of user emails and of the connection to the Facility Hero.com service

Acti9 Smartlink SI B (cont.)

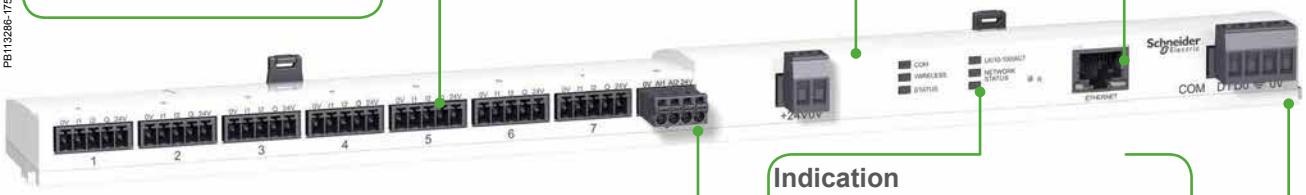
Acti9 Smartlink SI B (A9XMZA08)

Ti24 connector
7 input/output channels
Input protected against voltage reversals
Output protected by current limiting
- Pin 1: 0 V
- Pin 2: I1 Input 1
- Pin 3: I2 Input 2
- Pin 4: Q Output
- Pin 5: +24 V DC

24 V DC power supply connector
Input protected against voltage reversals
- Pin1: 0 V
- Pin2:+24 V DC

Ethernet connector
100 Base T - RJ45

PB113286-175



Indication
- Indication of operation of the communication system and the state of the Acti9 Smartlink SI B

Analog connector
2 configurable input points, either 0-10 V or 4-20 mA
- Pin 1: 0 V
- Pin 2: AI1 Input 1
- Pin 3: AI2 Input 2
- Pin 4: +24 V DC

Serial port connector
Modbus (Master) RS485
- Pin 1: D1 Modbus
- Pin 2: D0 Modbus
- Pin 3: shielding
- Pin 4: common/0 V

20 PowerTag energy sensors
Radio-frequency communication
- ISM band 2.4 GHz (2.4 GHz to 2.4835 GHz)
- Channels 11 to 16 as per IEEE 802.15.4

Note: Acti9 Smartlink SI B and the PowerTag must be installed in the same switchboard

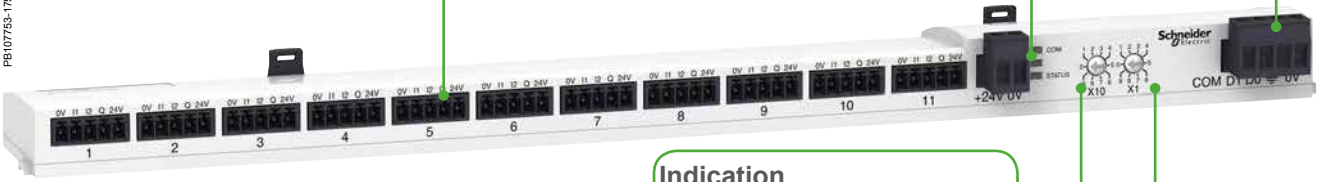
Acti9 Smartlink Modbus (A9XMSB11)

Ti24 connector
11 input/output channels
Input protected against voltage reversals
Output protected by current limiting
- Pin 1: 0 V
- Pin 2: I1 Input 1
- Pin 3: I2 Input 2
- Pin 4: Q Output
- Pin 5: +24 V DC

Serial port connector
Modbus (Master) RS485
- Pin 1: D1 Modbus
- Pin 2: D0 Modbus
- Pin 3: shielding
- Pin 4: common/0 V

24 V DC power supply connector
Input protected against voltage reversals
- Pin1: 0 V
- Pin2:+24 V DC

PB107753-175



Indication
- indication of operation of the communication system and the state of the Acti9 Smartlink Modbus

Thumbwheels
- Definition of the address in the Modbus network

Acti9 Smartlink SI B (cont.)

Common technical characteristics

Power supply		
Nominal		24 V DC ± 20 %
Maximum input current		1.5 A
Maximum inrush current		3 A
Meter		
Capacity		2^{32} pulses per input
Input characteristics		
Number of channels	Acti9 Smartlink Modbus (A9XMSB11)	11 2-input channels
	Acti9 Smartlink SI B (A9XMZA08)	7 2-input channels
Type of input		Current collector Type 1 IEC 61131-2
Maximum cable length		500 m
Rated voltage		24 V DC
Voltage limits		24 V DC ± 20 %
Rated current		2.5 mA
Maximum current		5 mA
Filtering time	A l'état 1	2 ms
	A l'état 0	2 ms
Isolation		No isolation between channels
Negative sequence voltage protection		Yes
Output characteristics		
Number of output channels	Acti9 Smartlink Modbus (A9XMSB11)	11
	Acti9 Smartlink SI B (A9XMZA08)	7
Type of output		24 V DC - 0.1 A current source
Maximum cable length		500 m
Rated voltage	Voltage	24 V DC
	Maximum current	100 mA
Filtering time	In state 1	2 ms
	In state 0	2 ms
Voltage drop (voltage in state 1)		1 V max
Maximum inrush current		500 mA
Leakage current		0.1 mA
Overvoltage protection		33 V DC
Environmental characteristics		
Temperature	Operating	-25°C ... +60°C (if vertical mounting, limited to 50°C)
	Storage	-40°C ... +80°C
Tropicalization		Treatment 2 (relative humidity of 93 % at 40°C)
Resistance to voltage dips		10 ms, class 3 as per IEC 61000-4-29
Degree of protection		IP20
Pollution degree		3
Altitude	Operating	0 … 2000 m
Vibration resistance	As per IEC 60068.2.6	1 g / ± 3.5 mm - 5 Hz to 300 Hz - 10 cycles
Shock resistance	As per IEC 60068.2.27	15 g / 11 ms
Immunity to electrostatic discharge	As per IEC 61000-4-2	Air: 8 kV Contact: 4 kV
Immunity to radiated magnetic fields	As per IEC 61000-4-3	10 V/m - 80 MHz to 3 GHz
Immunity to fast transients	As per IEC 61000-4-4	1 kV for inputs/outputs and Modbus communication. 2 kV for 24 V DC power supply - 5 kHz - 100 kHz
Immunity to conducted magnetic fields	As per IEC 61000-4-6	10 V from 150 kHz to 80 MHz
Immunity to magnetic fields at mains frequency	As per IEC 61000-4-8	30 A/m
Resistance to corrosive atmospheres	As per IEC 60721-3-3	Level 3C2 on H_2S / SO_2 / NO_2 / Cl_2
Fire resistance	For live parts	At 960°C 30 s / 30 s as per IEC 60 695-2-10 and IEC 60 695-2-11
	For other parts	At 650°C 30 s / 30 s as per IEC 60 695-2-10 and IEC 60 695-2-11
Salt spray test	As per IEC 60068.2.52	Severity 2
Environment		In compliance with the RoHS directive
Prefabricated cable characteristics		
Dielectric strength		1 kV / 5 min
Minimum draw-out resistance		20 N
Electromagnetic compatibility		
Reference standards	Immunity	EN 55024
	Emissions	EN 55022
	Electromagnetic compatibility and Radio spectrum Matters (ERM)	EN 300328 EN 301489-1 EN 301489-17

Acti9 Smartlink Modbus (A9XMSB11) technical characteristics

Characteristics of the Modbus link		
Link		Modbus, RTU, RS485 serial connection
Transmission	Transfer rate	9600 baud ... 19200 baud, self-adaptable
	Medium	Shielded cable, double twisted pair
Protocol		Master/Slave
Type of device		Slave
Modbus addressing range		1 to 99
Maximum length of the bus		1000 m
Type of bus connector		4-pin connector

Acti9 Smartlink SI B (A9XMZA08) technical characteristics

Characteristics of the Ethernet link		
Link		Ethernet 10/100 MB
Protocol		Modbus TCP server
		http (web pages)
Addressing mode		Static and dynamic (supplied, by default, in dynamic mode)
Gateway characteristics		
Protocol		Modbus TCP/IP -> Modbus SL
Number of Modbus slaves		8
Modbus addressing range		1 to 247
Characteristics of the Modbus Master link		
Link		Modbus, RTU, RS485 serial connection
Transmission	Transfer rate	9600 bauds ... 19200 bauds
	Medium	Shielded cable, double twisted pair
Maximum length of the bus		1000 m
Type of bus connector		4-pin connector
Characteristics of analog inputs		
Number		2
Type		Independent settings for each input, either 0-10 V or 4-20 mA
Measuring accuracy		1/100 full scale
Resolution		12 bits
Acquisition time		500 ms
Isolation		No isolation between channels
Power supply		0-24 V DC
Cable type		Shielded cable, twisted pair
Maximum cable length		30 m
Protection		Short-circuit protection
Characteristics of the wireless-communication link		
Compatible devices		PowerTag energy sensors
Maximum number of sensors		20
Radio-frequency communication		2.4 GHz to 2.4835 GHz at 0 dBm

PowerTag Acti9 63 A

A9MEM1522

A9MEM1572

IEC 61557-12 PMD/DD/K55/1

PowerTag is a wireless-communication energy sensor
PowerTag energy sensor is designed specifically for Energy Management, Load Monitoring and Power Availability applications.

With its compact design and innovative concept, PowerTag fits directly on the protective device and as a result has no impact on DIN rail occupancy and switchboard size.
Voltage and current are therefore measured directly at the same point on the circuit to be monitored, providing accurate measurement and relevant information such as voltage loss.
PowerTag energy sensor incorporates every feature required to perform accurate real-time measurements (U, V, I, P and PF) and metering values (Ea). Used together with a concentrator to collect and process the data, it provides circuit monitoring and diagnosis down to load level.

- Wireless-communication technology simplifies switchboard wiring and commissioning operations: no wiring is required for the PowerTag to communicate with the concentrator.
- System scalability: PowerTag energy sensor can be quickly and easily installed in new or existing panels at any time.
- Different designs of the PowerTag energy sensor are available to ensure it fits the protective device on which it is mounted.
- PowerTag Acti9 63 A is compatible with the Acti9 and Multi9 ranges as per the selection guide CA908058.

A9MEM1570

Functions

PowerTag energy sensor measures the following values in accordance with the IEC 61557-12 standard
- Active energy (class 1), total and partial (kWh), delivered and received.
- Real-time measurement values:
  - phase-to-neutral and phase-to-phase voltages (V),
  - current per phase (A),
  - active power, total and per phase (W),
  - apparent power total (VA),
  - power factor.
- Voltage loss alarms:
  - PowerTag energy sensor sends a "voltage loss" alarm and the current-per-phase value before being de-energized,
  - at "voltage loss", PowerTag adds an overload alarm if the current is higher than the rated current of the associated protective device.

Note: Functions listed above depends on concentrator.

Main associated concentrators (*)

For Commercial & Building applications

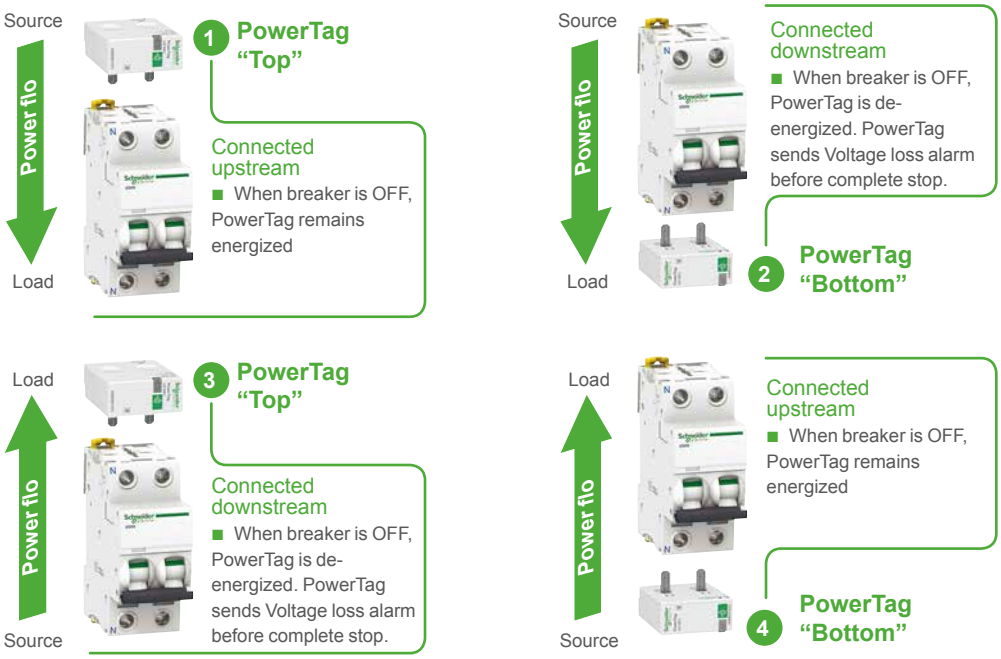
Refer to the concentrator catalogs for more information (CA907030, CA907032, CA907035).

PowerTag Acti9 63 A (cont.)

Mounting positions



Note:
- In association with a contactor, a Variable Speed Drive or a motor starter: PowerTag can ONLY be installed UPSTREAM these devices.
- Some PowerTag can be installed either on the TOP or on the BOTTOM of the protective devices.
- Check the possible mounting position as indicated in the "Catalog numbers" chapter.

Connection		Features
Upstream	1 4	■ Energy management: consumption in kWh ■ Load monitoring: real-time measurements
Downstream Preferred installation to take full benefit of voltage loss in diagnosing the load	2 3	■ Energy management: consumption in kWh ■ Load monitoring: real-time measurements ■ Power availability: voltage loss

PowerTag Control

PowerTag C IO 230V

PowerTag C 2DI 230V

PowerTag Control are wireless-communication modules designed specifically for Control and Monitoring applications. They are part of PowerTag System and Wiser System, allowing to turn easily a distribution board into a connected panel.

PowerTag Control is designed to monitor a circuit, notifying wirelessly to the concentrator the information status of a contact (OF, SD, CT or TL position indication...).

Depending on its functionalities, PowerTag Control can operate a load remotely through a contactor, an impulse relay... thanks to wireless control orders from the concentrator.
Refer to the selection guide to select the right module as per the application required.

- Wireless-communication technology simplifies cabling and commissioning operations: no wiring is required for the PowerTag Control modules to communicate with the concentrator.
- System scalability: PowerTag Control modules can be easily installed in new or existing panels at any time with simple commissioning operation.
- PowerTag Control modules are DIN rail mounted.

Technical characteristics

Main characteristics		
Power supply		230 V AC ± 20%
Frequency		50/60 Hz
Maximum consumption	IO	≤ 2 VA
	2DI	≤ 3 VA
Operating temperature		-25°C to +60°C
Storage temperature		-40°C to +85°C
Relative humidity (60068-2-78)		93 % at 40°C
Overvoltage category	As per IEC 61010-1	Cat. III
Altitude		≤ 2000 m
Pollution degree		3
Degree of protection according to IEC 60529	Front face	IP40
	Casing	IP20
	IK	05
Characteristics of inputs and outputs		
Digital input		
Type		230 V AC, dry contact
Digital output		
Type		230 V AC, dry contact
Relay type		Normally open or normally closed (3)
Applicable voltage on output		230 V AC ± 20%
Minimum/maximum current on output		10 mA / 2 A
Type of output order		Pulse or latch (3)
Pulse length in control mode with impulse relay		Nominal: 300 ms
Radio-frequency communication		
ISM band 2.4 GHz		2.4 GHz to 2.4835 GHz
Channels	As per IEEE 802.15.4	11 to 26
Isotropic Radiated Power	Equivalent (EIRP)	0 dBm
Channel occupancy	Messages sent	■ On event ■ Periodically (5s nominal)

Acti9 PowerTag Link C

IEC 60950, EN 61000-6-1, EN 61000-6-3, EN 61326-1, EN 62311:2007, ETSI EN 301 489-1, ETSI EN 301 489-17, ETSI EN 300 328

As per the above standard:
PowerTag Ambient for Temperature are wireless-communication modules designed specifically to collect temperatures measures for Monitoring applications. They are part of PowerTag System, thanks to wireless-communication to the PowerTag Link C concentrator.

The PowerTag Ambient for Temperature is to be placed directly in the targeted location (cold room/ fridge…) to monitor.
The sensor transmits information to the concentrator every 2 minutes.
The sensor also stores 1 measure per hour in order to enable the generation of HACCP compliant automated temperature reports.

- Wireless-communication technology simplifies cabling and commissioning operations: no wiring is required for the PowerTag Ambient for Temperature modules to communicate with the concentrator, up to 100 m open field.
- System scalability: PowerTag Ambient for Temperature modules can be easily installed at any time with simple commissioning operation.
- PowerTag Ambient for Temperature modules work on battery and can be installed with double-side tape, clamp or screw.
- Depending on the setup of the electrical panel where the PowerTag Link C is located, the quality of the signal can be improved by a repeater.

Accessory

- Relay antenna (signal repeater)

Electrical auxiliaries for iC60, iID, iC40, iCV40, iID40, iSW-NA

■ The electrical auxiliaries are combined with iC60, iC40, iC40 XA, iCV40, iCV40 XA, iDPN Vigi circuit breakers, iID, iID40 residual current circuit breakers, remote tripping switch disconnector iSW-NA; they enable tripping or remote indication of their position (open/closed/tripped) upon a fault.
■ They are fastened by clips (without tools) to the left side of the breaker.
■ The iOF/SD+OF auxiliary is a 2-in-1 product: via a mechanical selector switch, it provides two contacts, OF+SD or OF+OF.
■ The iOF+SD24 auxiliary can report open/closed (OF) status information and intentional or fault tripping of the associated device (SD) to the Acti9 Smartlink or a programmable logic controller via the TI24 interface (24 V DC).

Tripping auxiliaries:

IEC/EN 60947-1
■ iMN: undervoltage release
■ iMNs: delayed undervoltage release
■ iMNx: undervoltage release, independant from supply voltage
■ iMX: shunt release
■ iMX+OF: shunt release with open/close contact.

EN 50550
■ iMSU: overvoltage release.

Indication auxiliaries:

IEC/EN 60947-5-1
■ iOF: open/close contact
■ iSD: fault indicating contact
■ iOF/SD+OF: open/close contact and switchable OF or SD contact
■ iOF+SD24: open/close contact OF and default indicating contact SD with Ti24 interface.

IEC/EN 60947-5-4
■ iOF+SD24: open/close contact OF and default indicating contact SD with Ti24 interface.

DB404940

Electrical auxiliaries for iC60, iID, iC40, iCV40, iID40, iSW-NA (cont.)

Tripping

Auxiliaries	iMN				iMNs	iMNx	
Type	**Undervoltage release**						
	Instantaneous				Delayed	Independent of the supply voltage	
	PB104477-35 				PB104478-35 	PB104480-35 	
Function							
	■ Trips the device with which it is combined when its input voltage decreases (between 70 % and 35 % Un). ■ Prevents device closing again until its input voltage is restored					■ Tripping of the associated device by opening of the control circuit (e.g. push-button, dry contact)	
					■ Not tripping on transient voltage dip (up to 0.2 s)	■ A drop in the supply voltage does not trip the associated device ■ A locking push-button control allows the circuit protected (e.g. machine control) to be placed in safety configuration	
Wiring diagrams							
	DB118804 					DB406947 	
Use							
	■ Emergency stoppage by normally closed push button ■ Improve the safety of power supply circuits for several machines by preventing "uncontrolled" restarting					■ Emergency stoppage with fail-safe principle ■ Insensitive to control circuit voltage variation to increase service continuity **Important: Before any servicing operation switch off the mains power supply (voltage presence at terminals E1/E2)**

iMDU electrical auxiliary for Reflex iC60 or RCA iC60

A9C18195

The voltage matching module allows safety voltages of 24 and 48 V AC/DC to be used on the control inputs.

- Only connects to the Reflex iC60 circuit breakers remote controlled by a 220-240 V control voltage
- Galvanic isolation 6000 V
- Maximum combined power between terminals P and Y1/Y2: 100 mA at 230 V and 25°C.

Main characteristics		
Control circuit voltage		24…48 V AC/DC
Insulation voltage (Ui)		500 V
Additional characteristics		
Degree of protection (IEC 60529)	Device only	IP20
	Device in modular enclosure	IP40 Insulation class II
Operating temperature		-20°C to +60°C
Storage temperature		-40°C to +80°C
Tropicalization		Treatment 2 (relative humidity 95 % at 55°C)
Weight		53 g

Electrical auxiliaries for C60, C120, ID, C60H-DC, SW60-DC, C60PV-DC, C60NA-DC, C120NA-DC

■ The electrical auxiliaries provide the remote tripping or position (open/closed/tripped) indication functions of these devices in the event of a fault.
■ They clip on (no tool required) to the left-hand side of the associated device.
■ The OF+SD/OF auxiliary is a two-in-one product: a mechanical selector switch is used to select one of two contacts: OF+SD or OF+OF.
■ The OF+SD24 auxiliary can report open/closed (OF) status information and intentional or fault tripping of the associated device (SD) to the Acti 9 Smartlink or a programmable logic controller via the TI24 interface (24 V DC).

⚠
■ The electrical auxiliaries are not compatible with ID residual current circuit breakers of type B.

Tripping auxiliaries:

IEC/EN 60947-1
■ MN: undervoltage release
■ MNS: delayed undervoltage release
■ MNx: undervoltage release, independent of the supply voltage
■ MX: shunt release
■ MX+OF: shunt release with open/closed contact.

EN 50550
■ MSU: overvoltage release.

Indication auxiliaries:

IEC/EN 60947-5-1
■ OF.S: open/closed contact for ID
■ OF: open/closed contact
■ SD: fault indicating contact
■ OF+SD/OF: choice of open/closed contact and OF or SD contact via the selector switch
■ OF+SD24: open/close contact OF and cfault indicating contact SD with Ti24 interface.

IEC/EN 60947-5-4
■ OF+SD24: open/close contact OF and cfault indicating contact SD with Ti24 interface.

Electrical auxiliaries for C60, C120, ID, C60H-DC, SW60-DC, C60PV-DC, C60NA-DC, C120NA-DC (cont.)

Tripping

Auxiliaries	MN	MNS	MNx
Type	**Undervoltage release**		
	Instantaneous	Delayed	Independent of the supply voltage
	 PB107151-30	 PB107152-30	 PB107149-30
Function			
	■ Causes the device with which it is associated to trip when its input voltage decreases (between 70 % and 35 % of Un). Prevents the device from closing until its input voltage has been restored		■ Tripping of the associated device by opening of the control circuit (e.g. push-button, dry contact)
		■ No tripping in the event of transient voltage dips (up to 0.2 s)	■ A drop in the supply voltage does not trip the associated device ■ A locking push-button control allows the circuit protected (e.g. machine control) to be placed in safety configuration
Wiring diagrams			
	 DB118804		 DB406947
Utilization			
	■ Emergency stop via a normally-closed pushbutton ■ Ensures the safety of the power supply circuits of several machines by preventing accidental startups		■ Fail-safe emergency stop ■ Insensitive to the variation in the control circuit voltage to improve continuity of service **Important: Before any servicing operation switch off the mains power supply (voltage presence at terminals E1/E2)**

Electrical auxiliaries for NG125 devices

■ The electrical auxiliaries are combined with NG125 circuit breakers and NG125 switch-disconnectors; they provide the remote tripping or position (open/closed/tripped) indication functions of these devices in the event of a fault.
■ They clip on (no tool required) to the left-hand side of the associated device.

IEC/EN 60947-2

■ Tripping auxiliaries:
□ MN: undervoltage release
□ MNx: undervoltage release, independent of the supply voltage
□ **MX**+OF: shunt release with open/closed contact
□ MXV: shunt release for Vigi add-on residual current device.

IEC/EN 60947-5-1

■ Indication contacts:
□ OF+OF: open/closed contact
□ OF+SD: fault indicating contact
□ MX+**OF**: shunt release with open/closed contact.

Tripping

Auxiliaries	MN	MNx	MX+OF
Type	Undervoltage release		Shunt release
	Instantaneous	Independent of the supply voltage	With open/closed auxiliary contact
	056367_SE-30 	057084N_SE-30 	056368_SE-35 
Function			
	■ Causes tripping of the device with which it is combined when its input voltage decreases (between 70% and 35% of Un). Prevents closing of the device until its input voltage has been restored	■ Tripping of the associated device by opening of the control circuit (e.g. push-button, dry contact)	■ Causes tripping of the associated device when powered
		■ A drop in the supply voltage does not trip the associated device ■ A locking push-button control allows the circuit protected (e.g. machine control) to be placed in safety configuration	■ Includes an open/closed contact (OF) to indicate the "open" or "closed" position of the associated device
Wiring diagrams			
	DB123415 	DB123416 	DB407165 Utilization			
	■ Emergency stop by normally-closed pushbutton ■ Ensures safety of the power supply circuits for several machines by preventing untimely restarting	■ Fail-safe emergency stop ■ Insensitive to variations in the control circuit voltage for improved continuity of service **Important: Before any servicing operation switch off the mains power supply (voltage presence at terminals E1/E2)**	■ Provided with a self-interrupting contact

RCA remote controls
For iC60 circuit breakers

PB106253-40

PB106251-40

The RCA remote control system allows:
- Remote electrical control (opening and closing) of circuit breakers with or without Vigi add-on RCD, with or without auxiliary.
- Circuit-breaker resetting after tripping, in accordance with safety principles and the regulations in force.
- Local control by operating handle.
- Circuit placing in safety configuration by padlocking.

2 choices of operation after tripping:
- A: Enabling of remote circuit-breaker resetting;
- B: Inhibition of remote resetting.

The version with Ti24 interface allows:
- Direct interfacing of remote control with a programmable logic controller (PLC), a supervision system and any other communication device, having inputs/outputs in 24 V DC (control, OF and SD indications).
- Fast, reliable connection of the remote control to the Acti 9 Smartlink thanks to the prefabricated cables.
- Remote indication by "OF" potential-free contact.
- Provision of 2 operating modes, "1 and 3".

The iMDU auxiliary allows RCA control in 24/48 V AC/DC.

Acti9 iCT contactors (cont.)

DB123399 DB116619 DB106604 DB122858
DB406142 DB405227

IEC/EN 61095

As per the above standards:

Acti9 iCT contactors are available in two versions:

- Contactors without manual operation
- Contactors with manual operation.

The breadth of the Acti9 iCT contactor range satisfies most application cases.
Acti9 iCT contactors can be combined with auxiliary control, protection and indication functions.

- Acti9 iCT contactors can be used to remote control applications in alternating current:
  - lighting, heating, ventilation, roller blinds, sanitary hot water,
  - mechanical ventilation systems, etc,
  - load-shedding of non-priority circuits.

> Contactors

Acti9 iCT 2P

PB106115-35

manual control

Acti9 iCT 4P

PB106105-35

> Contactor auxiliaries

PB106120-34

Indication Acti9 iACTs

- This auxiliary allows indication of the "open" or "closed" position of the contactor power contacts

PB106124-34

Interference filterin Acti9 iACTp

- This auxiliary is an interference suppressor which limits overvoltages on the control circuit

PB106123-34

Dual control Acti9 iACTc

- Used to control a contactor in impulse-type mode or to combine latched or impulse-type control orders

PB107751-34

Control and indication 24 V DC Acti9 iACT24

- Allows control and indication of a 230 V AC contactor from the Acti9 Smartlink or by a PLC, by 24 V DC signals
- Also allows control by a maintained signal

PB106125-34

Time delay Acti9 iATEt

- This auxiliary is used to time delay for Acti9 iCT and iTL.

According to cabling, there are 5 possible time delay types:

- 1 for iTL
- 4 for iCT

Function type A: late closing
Delay energizing of contactor

Function type B: time delay

- Energize the contactor by closing a push button
- The time delay starts as soon as the control contacts are closed

Function type C: late opening

- Energize the contactor by closing a push button
- The time delay starts when the control contacts are opened

Function type H: fixed time operation

- Operate the contactor for a pre-determined time from the moment of energizing

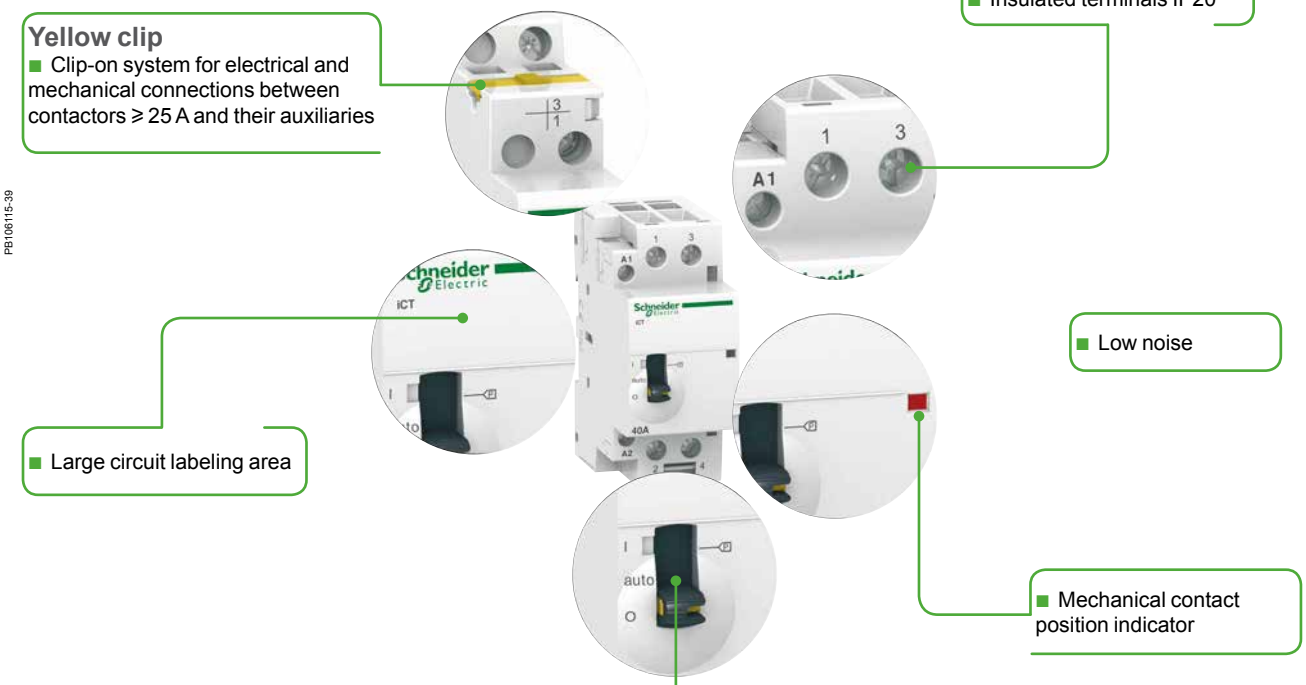
Acti9 iCT contactors (cont.)

Yellow clip
■ Clip-on system for electrical and mechanical connections between contactors ≥ 25 A and their auxiliaries

■ Insulated terminals IP20



■ Large circuit labeling area

■ Low noise

■ Mechanical contact position indicator

■ Consistent with the entire Acti9 offer and with all types of lighting

■ Manually-operated contactors have a 4-position selector switch on their front face:
□ automatic operating mode
□ temporary "ON" override
□ permanent "ON" override: used to lock the contactor in the ON position during installation maintenance
□ shutdown

Technical data

Power circuit		
Voltage rating (Ue)	1P, 2P	250 V AC
	3P, 4P	400 V AC
Frequency		50 Hz or 60 Hz
Type of load		See module CA908026
Endurance (O-C)		
Electrical		100,000 cycles
Maximum number of switching operations per day		100
Additional characteristics		
Insulation voltage (Ui)		440 V AC
Pollution degree		2
Rated impulse withstand voltage (Uimp)		2.5 kV (4 kV for 12/24/48 V AC)
Degree of protection (IEC 60529)	Device only	IP20
	Device in modular enclosure	IP40
Operating temperature		-5°C to +60°C
Storage temperature		-40°C to +70°C
Tropicalization (IEC 60068-2-30)		Treatment 2 (relative humidity 95 % at 55°C)
ELSV compliance (Extra Low Safety Voltage) for 12/24/48 V AC versions		
The product control conforms to the SELV (safety extra low voltage) requirements		

Temperature derating table

Acti9 iCT	Ambient temperature (°C)		
Rating (A)	**≤ 40**	**50**	**60**

Auxiliaries	**Acti9 iACTs**			**Acti9 iACTp**			**Acti9 iACTc**	
Type	**Indication**			**Interference filterin**			**Impulse/latched control**	
	With Open/Close auxiliary contact			2 protection circuits				
	PB106120-34 			PB106124-34 			PB106123-34 	
Function								
	■ This auxiliary allows indication of the "open" or "closed" position of the contactor power contacts			■ This auxiliary is an interference suppressor which limits overvoltages on the control circuit			■ This auxiliary, combined with contactors, enables them to be controlled by 2 order types: □ impulse order for local control (input T) □ latched order for centralised control (input X) □ the last order received takes priority	
Wiring diagrams								
	DB123777 	DB123778 DB123779 		DB123316 			DB123315 	
Mounting								
	■ Mounted to the right of Acti9 iCT			■ Mounted to the left of Acti9 iCT by yellow clips (1) ■ By wires			■ Mounted to the left of Acti9 iCT by yellow clips (1)	
Use								
				■ The iACTp has 2 separate and identical circuits, allowing it to be combined with 2 different one on the Acti9 iCT the other by wires			■ Mains power outages: □ < 70 ms: keeps its initial status □ > 80 ms: reset □ put back into operation by manual operation on input X or T. ■ Minimum impulse duration: 250 ms

Control (cont.)

Acti9 iATEt

Time delay

PB106125-34

- This auxiliary is used to time delay for Acti9 iCT and iTL. According to cabling, there are 5 possible time delay types:
  - 1 for iTL
  - 4 for iCT.

Function type A: late closing
- Delay energizing of contactor.

Function type B: time delay
- Energize the contactor by closing a push button.
- The time delay starts as soon as the control contacts are closed.

Function type C: late opening
- Energize the contactor by closing a push button.
- The time delay starts when the control contacts are opened.

Function type H: fixed time operation
- Operate the contactor for a pre-determined time from the moment of energizing.

Electrical auxiliaries for Acti9 iCT (cont.)

Control and indication

Auxiliary	Acti9 iACT24
Type	**Control and indication 24 V DC**
	With Ti24 connector

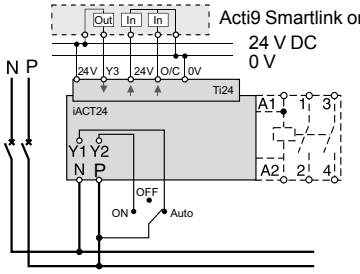
PB107751-34

Function

- This auxiliary allows a contactor to be interfaced with the Acti9 Smartlink interface or a programmable logic controller (PLC) in 24 V DC (control, O/C indication)
- 230 V AC control

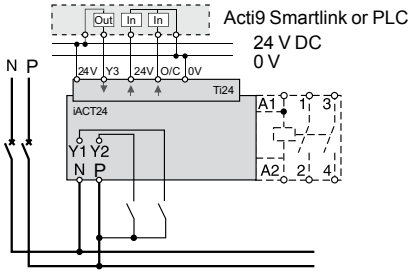
Wiring diagrams

DB124313



Wiring with exclusive selector
230 V AC control (Y1 = 0) / 24 V DC control (Y1 = 1)

DB124441



Wiring for non-exclusive 230 V AC and 24 V DC controls

Mounting

- To the left of the Acti9 iCT contactor using the yellow clips (1).
- When an iACT24 is used, the A1/A2 terminals of the contactors should not be wired. Only the yellow clips integral with the iACT24 should be used for connection to the coil.

Utilization

- 230 V AC interface:
  - Y1: enabling of 24 V DC control (Y1 = 1) or inhibition of 24 V DC control (Y1 = 0).
  - Y2: 230 V pulse control
- "Ti24" 24 V DC interface:
  - Y3: 24 V DC control of Acti9 iCT closing on rising edge and opening on falling edge
  - reading of the contactor status (opened or closed) from the position of the integrated O/C auxiliary contact
  - monitoring of connection of the "Ti24" terminal block by the upstream system (PLC, supervision system) via the 24 V terminal (in the centre of the Ti24 terminal block)

iTL impulse relays

DB123399 DB116619

iTL, iTLI, iTLs, iTLc, iTLm

Country approval pictograms

IEC/EN 60669-2-2
iTLs: IEC/EN 60947-5-1

Impulse relays

PB106126-34

PB106128-34

iTL

■ The impulse relays are used to control, by means of pushbuttons, lighting circuits consisting of:
□ incandescent lamps, low-voltage halogen lamps, etc. (resistive loads)
□ fluorescent lamps, discharge lamps, etc. (inductive loads)

Remote indication

PB106133-34

iTLs

■ Allows remote indication of its operating state (open/closed)

PB106139-34

Indication iATLs

■ Allows remote indication of the associated impulse relay

Centralised control

PB106130-34

iTLc

■ Allows centralised control of a group of TLc impulse relays, whilst at the same time retaining local impulse-type control

PB106137-34

Centralised control iATLc

■ Used for centralised control, thanks to a "pilot line", of a group of impulse relays controlling separate circuit, while at the same time maintaining local individual control of each impulse relay

Latched control

PB106132-34

iTLm

■ Operated by latched orders from a changeover contact (switch, time switch, thermostat). Manual control does not work

PB106138-34

Latched control iATLm

■ Controls the associated impulse relay by latched orders from a changeover contact

iTL impulse relays (cont.)

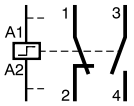
Impulse relays are used:

- Closing of the impulse relay pole(s) is triggered by an impulse on the coil.
- Having two stable mechanical positions, the pole(s) will be opened by the next impulse. Each impulse received by the coil reverses the position of the pole(s).
- Can be controlled by an unlimited number of pushbuttons.
- Zero energy consumption.

PB106131-34

Changeover contact iTLi

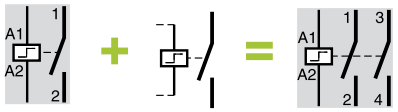
- This impulse relay has a changeover contact



PB106134-34

Extensions iETL

- Used to increase the number of impulse relay poles
- Can be installed on the iTL, iTLi, iTLc, iTLm and iTLs



PB106140-34

Centralised control + indication iATLc+s

- Used for centralised control, thanks to a "pilot line", of a group of impulse relays controlling separate circuit, while at the same time maintaining local individual control of each impulse relay
- Remote indication of the mechanical status of each relay

PB106136-34

Multi-level centralised control iATLc+c

- Allows centralised control of a group of iTLc or “iTL + ATLc” impulse relays

PB107752-34

Control and indication 24 V DC iATL24

- Allows control and indication of a 230 V AC impulse relay from the Acti 9 Smartlink or by a PLC, by 24 V DC signals
- Also allows control by a pulsed signal

PB106125-34

Time delay iATEt

- Combined with an impulse relay, it automatically disconnects the circuit after a preset time

PB106141-34

Control iATLz

- Must be used when installing several illuminated PBs in parallel to control an impulse relay (prevents operating malfunctions)

PB106142-63

Step by step control iATL4

- Allows step-by-step control of two circuits via a single pushbutton

Impulse relays auxiliaries

Control by illuminated push-buttons			
7	iATLz	230...240 V AC	**A9C15413**
Latched control			
8	iATLm (1)	12...240 V AC	**A9C15414**
Time delay control			
9	iATEt (4)	24...240 V AC	**A9C15419**
Control and indication			
10	iATL24	230 V AC	**A9C15424**

(1) The iATLc, iATLs and iATLm 9 mm auxiliaries must be mounted to the right of an impulse relay.
(2) Connection by traditional cabling.
The iATLc+c must be mounted to the right of an iATLc+s or an iATLc.

(3) The centralised control functions (iTLc, iATLc, iATLc+s, iATLc+c) only operate on AC voltage networks.

(4) iATEt: control voltage:
24...240 V AC, 24...110 V DC.

iTL impulse relays (cont.)

PB106126-41

Yellow clip
- A simple clip-on system for flexible auxiliaries combination and improved robustness
- For electrical and mechanical connections

- Large circuit labeling area

- Consistent with the entire Acti 9 offer and with all types of lighting

- Insulated terminals IP20

- Disconnection of remote control by selector switch (except for 4P single-piece iTL) for maintenance operation

- Manual controls on front face: direct and priority manual control by O-I toggle
- Mechanical contact position indicator

- Built-in or optional auxiliary function: state indication, centralised control, latched control, control for illuminated pushbutton,
step-by-step control, time delay

Control and indication

Auxiliaire	iATL24
Type	**Control and indication 24 V DC**
	With Ti24 connector

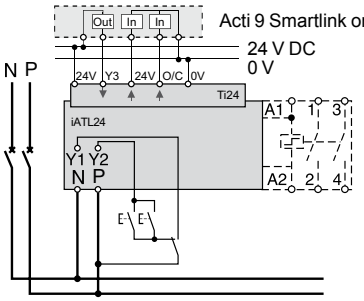
PB107752-34

Function

- This auxiliary allows a impulse relay to be interfaced with the Acti 9 Smartlink interface or a programmable logic controller (PLC) in 24 V DC (control, O/C indication)
- 230 V AC control

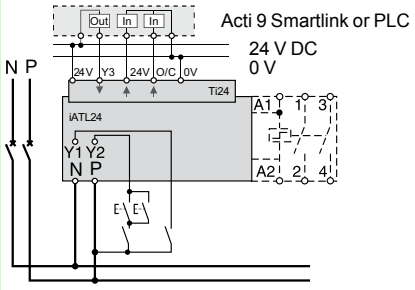
Wiring diagrams

DB124319



Wiring with exclusive selector 230 V AC and 24 V DC controls

DB124445



Wiring for non-exclusive 230 V AC and 24 V DC controls

Mounting

- To the left of the iTL impulse relay using the yellow clips (1).
- When an iATL24 is used, the A1/A2 terminals of the impulse relay should not be wired. Only the yellow clips integral with the iATL24 should be used for connection to the coil.

Utilization

- 230 V AC interface:
  - Y1: enabling of 24 V DC control (Y1 = 1) or inhibition of 24 V DC control (Y1 = 0).
  - Y2: 230 V pulse control
- "TI24" 24 V DC interface:
  - Y3: 24 V DC control of iTL closing on rising edge and opening on falling edge
  - reading of the impulse relay status (opened or closed) from the position of the integrated O/C auxiliary contact
  - monitoring of connection of the "Ti24" terminal block by the upstream system (PLC, supervision system) via the 24 V terminal (in the centre of the Ti24 terminal block)

iTL+ high-performance impulse relays

DB106604

Country approval pictograms

EN 60669-2-2

The iTL+ high-performance impulse relay allows remote control of single-phase circuits. It is designed for demanding applications.

The iTL+ high-performance impulse relay is used for push-button control of lighting circuits consisting of:
- incandescent lamps, low-voltage halogen lamps, etc. (resistive loads)
- fluorescent tubes, discharge lamps, etc. (inductive loads).

Bell transformers: EN/IEC 61558-2-8.
Safety transformers: EN/IEC 61558-2-6.

Bell transformers and safety transformers allow for a very low voltage (ELV 8 V, 12 V or 24 V) to be obtained from a low voltage network (LV 230 V).

All Schneider Electric transformers are:
- Safe: primary and secondary circuits are perfectly insulated by each other
- Resistant to short-circuit currents thanks to the built-in device
- Class II with terminal shield (optional).

Relays

Time delay relays

Time delay relays are used in service sector and industrial buildings for small automatic control systems: ventilation, heating, animation, roller blind servo controls, escalators, pumps, lighting, signalling, monitoring, etc.

iRTA
- Delays energizing of a load

iRTB
- Delays de-energizing of a load upon closing of an auxiliary contact (push button)

iRTC
- Delays de-energizing of a load upon opening of an auxiliary contact (push button)

Time delay

Interface relays

iRBN and iRTBT relays can interface automatic control system inputs/ outputs with low-voltage devices.

iRBN
Low level relay
- Actuation of low-amperage electronic circuits upon receiving an LV electrical order

iRTBT
Extra low voltage relay
- Actuation of LV circuits based on an extra low voltage order

Control

Control relays

Control relays monitor electrical parameters and indicate when they are exceeded

iRCP
Phase control
- Monitors the order and asymmetry of phases and the presence of voltage on the 3 phases of a three-phase circuit (power supply of a motor, etc.)

iRCI
Current control
- Monitors the current flowing in a circuit and indicates any crossing of the set threshold

Monitoring

Relays (cont.)

iRTH
- Applies a time delay to de-energizing of a load

iRTL
- Applies a time delay to energizing and de-energizing of a load during different times, repeatedly (flasher)

iRTMF
- Allows one of the four types of time delay to be selected: A, B, C or H

iRLI and iERL relays are used to relay ON or OFF information to the auxiliary circuits and actuate low-power loads

Changeover relays

iRLI
Changeover

iERL extension

- Relays ON or OFF information to the auxiliary circuits
- Actuates low-power loads

Relaying and control

iRCU
Voltage control
- Monitors the potential difference of a circuit and indicates any crossing of the set threshold

iRCC
Compressor control
- Monitors the compressor power supply and prevents its immediate restarting upon detection of a power cut or voltage dip

Time delay relays
iRTA, iRTB, iRTC, iRTH, iRTL and iRTMF (cont.)

	iRTH	iRTL	iRTMF
	PB111584-35 	PB111585-35 	PB111586-35 
	■ Applies a time delay to de-energizing of a load	■ Applies a time delay to energizing and de-energizing of a load during different times, repeatedly (flasher)	■ Allows one of the four types of time delay to be selected: A, B, C or H
	DB123678 	DB123679 	DB123680 	DB123684 	DB123685 	
	■ The single time delay cycle starts at switching on of the iRTH relay power supply ■ The load is de-energized at the end of time delay T	■ The time delay cycle starts at energizing ■ The load is energized during an adjustable time T1 and then de-energized during an adjustable time T2. This cycle is reproduced until de-energizing of the iRTL relay power supply	■ Depending on the choice, the iRTMF generates time delay cycles for the iRTA, iRTB, iRTC or iRTH relays

Interface relays iRBN, iRTBT

Interface relays

	iRBN	iRTBT
Type	**Low level**	**Extra low voltage**
	PB107144-35 	PB107164-35 
Standard	IEC/EN 61810-1	IEC/EN 61810-1
Function		
	■ Actuation of low-amperage electronic circuits upon receiving an LV electrical order	■ Actuation of LV circuits based on an extra low voltage order
Wiring diagrams		
	DB123686 	DB123686 Use		
	■ Inputs of programmable logic controllers, of measuring or supervision circuits, etc.	■ ELV orders can be issued by a programmable logic controller (24 V DC static outputs), a central fire detection unit, a regulation system, etc.
Catalogue numbers	**A9A15393**	**A9A15416**

Technical specification			
Input control voltage (Uc)	V AC	230, ±10 %	12...24, -15 to +10 %
	V DC	-	12...24, ±20 %
Output contact rating	Mini	5 mA/5 V DC (DC12) 5 mA/5 V AC	10 mA/10 V DC (DC12) 10 mA/10 V AC
	Maxi	1 A/24 V DC (DC12) 5 A/250 V AC	1 A/24 V DC (DC12) 5 A/250 V AC
Operating frequency	Hz	50/60	0…60
Strengthened insulation between ELV/LV circuits		4 kV	4 kV
Consumption	At inrush	5 VA	0.22 W
	At holding	2.5 VA	0.11 W
Endurance	Electrical	100,000 switching operations	100,000 switching operations

iRLI changeover and iERL extension relays

Changeover and extension relays

		iRLI				iERL			
Type		**Changeover relay**				**Extension for RLI**			
		PB107108-35 				PB107109-35 			
Standard		IEC/EN 61810-1 and NF C 45-250				IEC/EN 61810-1 and NF C 45-250			
Function									
		■ Relaying of ON or OFF information to the auxiliary circuits and actuation of low-power loads				■ Extension allowing additional contacts to be added to the iRLI changeover relays			
Wiring diagrams									
		DB123687 				DB123688 			
Use									
		■ The iRLI relay contains 1 changeover contact (O-C) and 1 normally open contact (N/O)				■ The iERL extension (max. 3 iERLs for 1 iRLI) contains 1 changeover contact (O-C) and 1 normally open contact (N/O) ■ Can be mounted without any tool and without additional cabling using a yellow clip which performs mechanical assembly and electrical connection between the coils			
Catalogue numbers		**A9E15535**	**A9E15536**	**A9E15537**	**A9E15538**	**A9E15539**	**A9E15540**	**A9E15541**	**A9E15542**

iRCP phase control, iRCI current control, iRCU voltage control and iRCC compressor control relays

Control relays

	iRCI	iRCU
Type	**Current control**	**Voltage control**
	PB107125-35 	PB107126-35 
Function	■ Monitors the current (Ir) flowing in an AC or DC circuit and indicates any crossing of the set threshold	■ Monitors the voltage variation (Ur) of an AC or DC circuit and indicates any crossing of the set threshold
Wiring diagrams	DB405286 	DB405286 Catalogue numbers	**A9E21181**	**A9E21182**

Common technical specification			
Supply voltage (Uc)	V AC	230, -15 % à +10 %	
Frequency	Hz	50/60	
Parameter setting		■ On the front panel, by direct scale, using a screwdriver	
Precision of display		±10 % of full scale	
Output by changeover contact		8 A under 250 V AC (cos φ = 1)	
Indications by LED	Green	Voltage presence	
	Red	Fault	
Consumption	VA	3	
Dissipated power	W	2	
Degree of protection	Device only	IP20	
Connection by tunnel terminals	Rigid cable	1.5 x 6 mm²	
Width in 9-mm modules		4	
Operating temperature	°C	-5 … +55	
Storage temperature	°C	-40 … +80	
Particular technical specification			
		Threshold adjustable from 10 % to 100 % of Ir	Threshold adjustable from 10 % to 100 % of Ur
		Hysteresis adjustable from 5 % to 50 % of Ir	Hysteresis adjustable from 5 % to 50 % of Ur
		Monitoring of overcurrent and undercurrent (selection by selector switch)	
		Fail-safe contact	
		De-energized Energized with fault 	
		Energized without fault 	
		Time delay on crossing threshold: 0.1 s to 10 s	
		Possibility of memorizing fault with resetting	
		Compatible with current transformers (CTs) of ratio X/5	■ Automatic recognition of AC voltage or DC voltage. ■ 2 measuring ranges selected by cabling: □ 10 V to 50 V □ 50 V to 500 V
		■ Automatic recognition of alternating or direct current. ■ 2 measuring ranges selected by cabling: □ 0.15 A to 1.5 A □ 1 A to 10 A	

iRCP phase control, iRCI current control, iRCU voltage control and iRCC compressor control relays (cont.)

	iRCP	iRCC
	Phase control	**Compressor control**
	PB107124-35 	PB107127-35 
	■ Monitors phases and the presence of voltage on the 3 phases of a three-phase circuit (power supply of a motor, etc.). It indicates any phase loss or inversion	■ Monitors the compressor's power supply and prevents its immediate restarting upon detection of a power cut or voltage dip
	DB405265 	DB405267 	A9E21180	**A9E21183**
	400, ±15 %	230, -15 % à +10 %
	50/60	
	■ On the front panel, by direct scale, using a screwdriver	
	±10 % of full scale	
	8 A under 250 V AC (cos φ = 1)	
	Voltage presence	
	Fault	
	3	
	3 (total on the 3 phases)	2
	IP20	
	1.5 x 6 mm^2	
	4	
	-5 … +55	
	-40 … +80	
	Setting of phase asymmetry threshold: 5 % to 2 5% of 400 V	Threshold setting: ±5 % to ±15 % of 230 V
	Hysteresis: fixed, 5 % of asymmetry threshold	
	Monitoring of direction of phase rotation	
	Monitoring of presence of the 3 phases	
	Fail-safe contact	Fail-safe contact
	De-energized Energized with fault 	De-energized Energized with fault 
	Energized without fault 	Energized without fault 
	Time delay on tripping: 0.3 s	Time delay on overshoot: 3 or 6 minutes (selection by cabling)
